David Dickinson, co-author of *The Universe Today Guide to Viewing the Cosmos*, has created the ultimate field guide for backyard astronomers. Whether you want to impress viewers at a star party, or learn what you can see with your new telescope, David shows you how to find the most impressive the night sky has to offer. Backyard astronomy has become more accessible through apps and technology,

but they tend to be inaccurate and a source of frustration when trying to find objects with your telescope. With 44 sky charts and David's expertise, it's like having a pro-astronomer out in the field with you. Broken down by month and by hemisphere to ensure you get the best possible view, David shows you how to find objects like spiral galaxies, the 14th brightest star in the sky, and other stars that bring the "wow factor" to astronomy.

Boxing's colourful history is filled with chapters of

high drama and simmering controversy. Many boxing fans are familiar with the outcome of the most memorable bouts, but few know the secrets surrounding them. In 'The 12 Greatest Rounds of Boxing', Ferdie Pacheco not only selects the dozen best rounds ever fought, but reveals what went on behind the scenes at these fights, from chicanery and Mob influence to romantic liaisons and the zaniness that seems to go hand in glove with boxing. Did Muhammad Ali's 1965 'Phantom Punch' really knock out Sonny Litson, or was Sonny simply too scared to get off the canvas? With World War II looming, was German heavyweight champion warned by Adolf Hitler to beat Joe Louis - or else? Did Jack Dempsey have something illegal in his glove when he battered Jess Willard into bloody submission in 1919? The fascinating behind the scenes stories are related by Pacheco and a renowned group of boxing experts, offering an intimate glimpse of boxing inimitable characters and the often bizarre world they inhabit. *What We See in the Stars* Springer

Stargazing is among the most peaceful and

inspiring outdoor activities. Night Sky, the award-winning book by Jonathan Poppele, makes it more fun than ever! Take a simple approach to finding 62 constellations by focusing on one constellation at a time, instead of attempting to study dizzying charts. Start with the easy-to-find constellations during each season and work toward the more difficult ones. Better yet, you'll learn how to locate any constellation in relation to the Big Dipper, the North Star and the top of the sky. With two ways to locate each constellation, you'll know where in the sky to look and what to look for! Along the way, you'll be introduced to mythology, facts and tidbits, as well as details about the planets, solar system and more! As an added bonus, the book comes with a red-light flashlight for night reading.

The Stargazer's Handbook National Geographic Sets out a simple month-by-month program to reveal all of the night sky's biggest and most beautiful secrets in just one year — and with only a few hours of stargazing each month By investing just an hour a week and \$50 in binoculars, it ' s possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns — and what they tell us about Earth, the seasons and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12 month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey he learns about

the celestial mechanics at work in the skies above that are — to the beginner — almost beyond belief. As well as the vital constellations and clusters, and the weird and wonderful nebulae, he searches out “ dark sky destinations ” across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey he witnesses a solar eclipse and grapples with star-charts, binoculars, smartphone apps, telescopes, spots satellites and attempts basic astro-photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are and even where the Galactic Center Point is.
