The topics in this volume explore the etiology, cellular mechanisms, epidemiology, genetics, models and potential therapeutic measures for the blinding diseases of retinitis pigmentosa and age-related macular degeneration. Special focus is highlighted in the areas of Mechanisms of Photoreceptor Degeneration and Cell Death (extremely important because very little is known how or why photoreceptors die in these diseases, despite an abundance of genetic information), Age-Related Macular Degeneration (with several novel approaches to its analysis), Usher Syndrome (the most severe form of retinitis pigmentosa, which includes an early or congenital loss of hearing along with blindness), and Gene Therapy. In addition, the section on Basic Science Related to Retinal Degeneration is particularly strong with several laboratories reporting on new discoveries in the area of outer segment phagocytosis, a key component of photoreceptor-retinal pigment epithelial cell interactions in normal and degenerating retinas.

In the current resurgence of interest in Heidegger, an important aspect of his thought has been neglected--namely, his long-standing interest in Asian philosophy. Heidegger and Asian Thought is the first book devoted to exploring this fascinating topic. It brings together essays twelve scholars from India, China, Japan, Germany, and the United States, most of which were written especially for this volume. The essays discuss Heidegger's thinking in relation to Vedanta, Taoism, Zen, and Tibetan Buddhist philosophy. Heidegger's acquaintance with Asian thought--beginning from his familiarity with the Chuang-tzu as early as 1930--is fully documented, including an account of his work on a partial translation of the Tao Te` Ching into German. This book will be of interest not only to Heidegger scholars but also to students of Asian and comparative philosophy and religion.

Academic Paper from the year 2021 in the subject Philosophy - Practical (Ethics, Aesthetics, Culture, Nature, Right, ...), grade: 9.8, Kampala International University (Kampala International University), course: Law, language: English, abstract: This analysis aims to investigate the relationship between law and morality and whether the connection is necessary. In this project, I will be analyzing the relationship between morality and the law, emotive topics concerning euthanasia and whether it should be legalized in England, including arguments for and against referring to philosophy and case law. I will be looking at the issue from an ethical perspective, raising many legal matters including the right to life, the right to liberty and the rights and duties of doctors, as well as opposing views taken by religious people referring to case law throughout.

As this volume demonstrates, immunobiology is a young science which is undergoing explosive growth. Judged by results, it is already an elaborate discipline which cuts across every other area in biomedical research and even has its own vocabulary (e.g., the "veto" effect). Rather than inculcate the habit of superficial learning by having the student go through a maze of

details, we have sought to gather together sixteen essays that range from T-cells to psychoneuroimmunology. This is keeping with the growing understanding that the student is expected to read and think far more for herself/himself. Next to nothing is known about innate immunity. However, recent evidence suggests that collectins might bridge the gap between innate immunity and specific clonal immune responses. Collectins are soluble effector proteins that include serum mannose-binding protein, and lung surfactants A and D. They are considered to be ante-antibodies.

Scott King's podcast investigates the 1995 cold case of a demon possession in a rural Yorkshire village, where a 12-year-old boy was murdered in cold blood by two children. Book six in the chilling, award-winning Six Stories series. _____ In 1995, the picture-perfect village of Ussalthwaite was the site of one of the most heinous crimes imaginable, in a case that shocked the world. Twelve-year-old Sidney Parsons was savagely murdered by two boys his own age. No reason was ever given for this terrible crime, and the 'Demonic Duo' who killed him were imprisoned until their release in 2002, when they were given new identities and lifetime anonymity. Elusive online journalist Scott King investigates the lead-up and aftermath of the killing, uncovering dark and fanciful stories of demonic possession, and encountering a village torn apart by this unspeakable act. And, as episodes of his Six Stories podcast begin to air, King himself becomes a target, with dreadful secrets from his own past dredged up and threats escalating to a terrifying level. It becomes clear that whatever drove those two boys to kill is still there, lurking, and the campaign of horror has just begun... _____

For more than a century, microscopy has been a centerpiece of extraordinary discoveries in biology. Along the way, remarkable imaging tools have been developed allowing scientists to dissect the complexity of cellular processes at the nano length molecular scales. Nanoimaging: Methods and Protocols presents a diverse collection of microscopy techniques and methodologies that provides guidance to successfully image cellular molecular complexes at nanometer spatial resolution. The book's four parts cover: (1) light microscopy techniques with a special emphasis on methods that go beyond the classic diffraction-limited imaging; (2) electron microscopy techniques for high-resolution imaging of molecules, cells and tissues, in both two and three dimensions; (3) scanning probe microscopy techniques for imaging and probing macromolecular complexes and membrane surface topography; and (4) complementary techniques on correlative microscopy, soft x-ray tomography and secondary ion mass spectrometry imaging. Written in the successful format of the Methods in Molecular Biology™ series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and accessible, Nanoimaging: Methods and Protocols highlights many of the most exciting possibilities in microscopy for the investigation of biological structures at the nano length molecular scales.

Recent research suggests that adult growth hormone (GH) deficiency, whether of pathological or physiological origin, is associated with a distinct syndrome that includes alterations in body composition, endocrine metabolic function, immune competence, and physical and psychosocial well-being. Not surprisingly, substantial investigative effort is currently focused on validating the above hypothesis and on determining whether restoration of a normal GH-IGF-I axis in various states of adult GH deficiency is clinically useful, safe, and cost-beneficial. This book contains the proceedings from the Symposium on GHRH, GH, and IGF-I: Basic and Clinical Advances, held December 9 to 12, 1993, in San Diego, California, and sponsored by Serono Symposia USA, Inc. The conference was meant to highlight selected novel and exciting clinical research developments related to possible therapeutic uses of recombinant human GH and IGF-I, GHRH, GH releasing peptides, and related GH secretagogues. This meeting occurred only one year after a similar Serono symposium that was somewhat more oriented to novel basic science discoveries, thus attesting to the current scientific and clinical interest in this area.

This guidance covers the practical application of photogrammetry in recording cultural heritage, with particular

reference to structure from motion (SfM) techniques. Our audience for this document includes survey contractors, archaeological contractors, voluntary organisations and specialists. Photogrammetric image acquisition and processing, until recently requiring a considerable investment in hardware and software, are now possible at a fraction of their former cost. This has led to a huge increase in the use of photogrammetry in cultural heritage recording. The skills required to apply the techniques successfully and accurately are discussed, and background information on how various parts of the process work is provided so that better results can be achieved through better understanding. Photogrammetry is characterised by its versatility, and is applicable over a wide range of scales, from landscapes to small objects. The particular requirements needed at these different scales are outlined, and both imaging techniques and useful ancillary equipment are described. The different types of outputs are discussed, including their suitability for further interrogation using a range of established analytical techniques and the presentation options available. A range of case studies illustrates the application of photogrammetry across a variety of projects that broadly reflect the areas discussed in the text. This document is one of a number of Historic England technical advice documents on how to survey historic places.

The management of technological innovation (MTI) is one of the most important challenges facing businesses today. Innovation has become the fundamental driver of competitiveness for firms of all sizes in virtually all business sectors and nations. The first edition of this book has become one of the most popular texts for students of innovation and technology management. This new edition sees David Gann and Ammon Salter join Mark Dodgson as authors, drawing on their combined experience of 60 years of researching and teaching MTI. It combines the most relevant theoretical analysis with contemporary and historical empirical evidence to provide a comprehensive, yet concise and readable, guide to the challenges of MTI. By explaining the innovation process the book reveals the broad scope of MTI and its importance for company survival, growth and sustainability. It describes how MTI has to be managed strategically and how this is successfully achieved by formulating and implementing strategy and delivering value. Chapters provide frameworks, tools and techniques, and case studies on managing: innovation strategy, communities, and networks, R&D, design and new product and service development, operations and production, and commercialization. Based on robust analysis, the book provides a wide range of empirical evidence from a huge diversity of case studies, with around fifty case studies newly written for this edition. It analyses MTI in all parts of the world, in companies large and

small, and in services, manufacturing, and resource-based business sectors. This new edition has been fully revised and updated to reflect the latest teaching and research, and to ensure its continuing relevance to the contemporary world of MTI. It will be an important resource for academics, students, and managers throughout the world, is a recommended text for students of innovation and technology management at postgraduate and undergraduate level, and is particularly valuable for MBA courses.
