Cisco ASA, PIX, and FWSM Firewall Handbook Wesleyan University Press Despite its remote and seemingly rigorous environment, the Antarctic is the world's most important habitat for seals, currently supporting more seals than all other parts of the world combined. As various national Antarctic programmes were established to study these animals, the need to standardize techniques became apparent. This book, arising from work by the Scientific Committee on Antarctic Research (Group of Specialists on Seals), gives a detailed account of well-tried and, where possible, agreed methodologies, techniques, procedures and rationale for the collection and initial analysis of data on the biology and population ecology of Antarctic seals. This volume will not only help facilitate comparisons between different regions of Antarctica, but will also provide a guide for those studying seals in other parts of the world and those carrying out research on other large mammal species.

The Care of Prints and Drawings Cambridge University Press

In much of the recent scholarship on post-Byzantine art, a key role is played by the Hermeneia - a painter's manual written by Dionysius of Fourna around 1730. This manuscript outlines artistic practices of Greek Orthodox artists working on Mount Athos in the eighteenth century; it records their traditions and techniques, but it also relates certain ideological positions maintained by its

author. Scholars in the past have emphasized traditionalistic qualities in the manuscript. This allowed them to describe Dionysius as a traditionalist - one who staunchly resisted modernization and one who defended Byzantine traditions against the growing cultural Europeanization of the Balkans in the eighteenth century. In the study at hand, I point out a number of elements that problematize this commonly maintained opinion of past scholars. By focusing on qualities in Dionysius's work that contradict his supposed traditionalistic inclinations, I demonstrate that the ideological position that Dionysius posited is more complex. I use the contents of the *Hermeneia* and Dionysius's paintings as evidence for determining his ideological and conceptual position on art - his artistic identity. I question the presumptions put forward in the past, and I reassess the possible motives that might have compelled Dionysius to write the *Hermeneia*. According to my findings, the preservation and the promotion of Byzantine artistic traditions of the past were not his primary objectives. In order to address the cultural crisis around him, Dionysius strategically incorporated select aspects of tradition, past and new practices, and contemporary ideas into his work. I attempt to show that Dionysius's artistic identity is characterized by conscious synthesis of modern practices with past traditions and by the fusion of contemporary currents with eighteenth-century Orthodox monastic culture in order to enrich and to contribute to the vibrancy of his artistic culture and to bring it up to date with contemporary artistic practices.

Carnivores have always fascinated us, even though they make up only 10% of all mammalian genera and only about 2% of all mammalian biomass. In Greek mythology most of the gods adorned their robes and helmets with depictions of carnivores, and the great hero Hercules' most famous feat was killing the "invulnerable" lion with his bare hands. Part of our fascination with carnivores stems from fright and intrigue, and sometimes even hatred because of our direct competition with them. Cases of "man-eating" lions, bears, and wolves, as well as carnivores' reputation as killers of livestock and game, provoke communities and governments to adopt sweeping policies to exterminate them. Even President Theodore Roosevelt, proclaimer of a new wildlife protectionism, described the wolf as "the beast of waste and desolation." The sheer presence and power of carnivores is daunting: they can move quickly yet silently through forests, attaining rapid bursts of speed when necessary; their massive muscles are aligned to deliver powerful attacks, their large canines and strong jaws rip open carcasses, and their scissor-like carnassials slice meat. Partly because of our fear of these attributes, trophy hunting of carnivores has been, and to a certain extent still is, a sign of bravery and skill. Among some Alaskan Inuit, for example, a man is not eligible for marriage until he has killed a succession of animals of increasing size and dangerousness, culminating with the most menacing, the polar bear.
