Alternate Light Source Imaging provides a brief guide to digital imaging using reflected infrared and ultraviolet radiation for crime scene photographers. Clear and concise instruction illustrates how to accomplish good photographs in a variety of forensic situations. It demonstrates how tunable wavelength light sources and digital imaging techniques can be used to successfully locate and document physical evidence at the crime scene, in the morgue, or in the laboratory. The scientific principles that make this type of photography possible are described, followed by the basic steps that can be utilized to capture high quality evidentiary photographs.

The designers at Nikon in 2004-05 were looking for a way to reach the semi-pro photographer. The semi-pro is someone who has another job but shoots photos Ñ often at weddings Ñ as a part-time job. They Õre sometimes called weekend warriors. They tend to be serious and dedicated, but they had no need for the pro digital single-lens reflex behemoths like the Canon EOS IDX Mark II or the Nikon D5. What they needed then and now is a DSLR camera that is built strong, is always reliable and can handle their workload. That led to the first true semi-pro camera from the company, the Nikon D200. The D200 may have been overshadowed by its successor, the Nikon D300, but it Õs still

a great camera. A great camera that can be had relatively cheaply, and that makes it an even better camera.

Film cameras - the bodies themselves - have little to do with image quality. Lenses are far more important to image quality than camera bodies. So, as long as your camera has accurate shutter speeds, aperture settings and metering, the brand you pick doesn't really have much of an effect upon the final image. So, then, it appears the model camera you choose is irrelevant. Well, no. The type of film SLR camera you choose is most important to you as the photographer in features and convenience. Comfort has a lot to do with how good you are as a photographer. What I mean by that is that, you choose a camera that feels comfortable in your hands and becomes an extension of your brain as a photographer. This makes it easier to capture the types of images you want.
