This book provides an introduction to the genetics, genomics, and breeding of the olive tree, a multi-functional long-lived crop plant that is relevant not only for culinary olive and oil production, but also for shaping the landscape and history of many rural areas for centuries. Today, the recognized health benefits of extra-virgin olive oil provide new impulses for introducing innovation in olive crop management and olive breeding for a deeper understanding of the biological processes underlying fruit quality, adaptation to crop environment and response to threatening epidemics due to biological agents such as Xylella fastidiosa. The individual chapters discuss genetic resources; classic and modern breeding methods for providing new olive cultivars; the genotype x environment interactions determining the response to biotic and abiotic stresses; fruit metabolism related to oil production and the synthesis of health beneficial molecules; the mapping of genes and quantitative trait locus; and genomic, transcriptomic and proteomic strategies pertinent to the development of a molecular platform and template amenable to precise and rapid genetic modifications using recently developed genome editing tools.

McCurry's photographs eloquently illustrate a country of contradictions, where the contemporary battles with the ancient and the spiritual clashes with the secular. Striking portraits of men and women, are presented alongside timeless images of children at play and shepherds tending their flocks and ancient sandstone cities are contrasted with shanty-towns constructed from tattered tarpaulins. The famous mountainous landscapes and ancient temples are shown together with scenes of daily life, such as a bread seller at his kiosk or traders at a market. McCurry's unique ability to cross boundaries of language and culture to capture stories of human experience is fully exhibited in this remarkable new collection of images.
