For the first time of its invention, photography has been used to visualize events that are either too fast or too slow for the eye to perceive, or subjects that are outside the spectral range of the human eye. This book shows how you can photograph a range of subjects and see the world as never before. Written with clear and accessible text, it explores and suggests techniques that expose new images in new ways, and pushes the boundaries of the photographer's creative potential. Techniques include: ultraviolet (UV) and infrared (IR) photography; high speed and time-lapse photography; close-up, macro and photography with the aid of a microscope and finally, photography using polarized light. Most of the techniques are accessible ot all photographers using readily available equipment (UV and IR will require some specialist items), and have been relatively unexplored so give the adventurous photographer great potential to experiment and produce unique images.

In The Nikon Autofocus System, 2nd Edition, photographer Mike Hagen, author of the bestselling The Nikon Creative Lighting System, takes his deep knowledge of Nikon technology and concentrates on its focus features. In this book, which covers all current Nikon DSLR models (including the D5 and D500), Hagen fully explains how Nikon autofocus works, including detailed discussions of all the autofocus modules, drive systems, and camera buttons and menus. He also devotes an entire chapter to explore how focus works with Nikon ' s lenses.

Armed with this general knowledge, Hagen then dives deep and offers camera setups, settings, and best practices for specific field techniques that address the photographic genres that are notoriously challenging for focus: action

and sports (indoor and outdoor), wildlife (including birds in flight), and macro photography. He also covers genres such as portrait, landscape, underwater, low-light, and street photography. Hagen not only advises on the best ways to set up the camera and focus systems, he gives helpful tips and tricks throughout the book.

The Nikon Autofocus System also covers:

- Live view autofocus methods and settings
- Achieving great focus in video
- AF tracking
- AF shooting styles, such as back-button AF and shutter-release AF
- HDR, panoramas, and other techniques for shooting with a tripod
- An entire chapter on additional terms and techniques, such as hyperfocal distance, calibrating lenses, focus and flash photography, and more

Discover the secrets to mastering street photography—from city streets to country roads and the alleyways in between—from an acclaimed international photographer, teacher, and bestselling author. Street photography offers treasured moments at almost every turn, if you know where to look. In Understanding Street Photography, readers will learn the techniques for capturing brilliant scenes, including images taken around the globe, from the vibrant streets of Varanasi, India, to the crowded walkways of the Charles Bridge in Prague, and so many other corners of the world. In this master class, street photography is defined as images that convey evidence of human interaction, whether that's a striking cityscape, an image of rush-hour foot traffic, the remains of a half-eaten sandwich, or a pedestrian portrait. Along the way, Bryan Peterson shares 120 "mini diaries": the story behind each image; the thought process; the arrangement of the composition; the psychology of the colors; and the lens, aperture, shutter speed, and ISO for readers to replicate his work. Professional and aspiring photographers alike will learn how to produce posed and candid compositions, capture light and movement, work with shadows, weather, and architecture, and hone your craft. Through lessons, exercises, and anecdotes, Peterson shares his best tips for capturing the unpredictable world of urban life in motion.

The Nikon D800 D800e is one of the Nikon cameras to win the Gold Award by Digital Photography Review. The camera has several functions that come as standard in the default function such as autofocus in some scenes and scenarios you will need to manually adjust the setting to achieve the quality photos as you shoot. The camera has white balance, ISO sensitivity and exposure compensation to reduce the effects of a different light source on how the camera captures the photo. There are different modes to help you change the shutter speed and aperture values to achieve the settings required for the different scenes.

Sometimes photographers have to shoot in less than ideal lighting situations. Maybe the wedding is mid-day in the middle of a field, or perhaps the event is in a florescent-lit room. These scenarios can be particularly intimidating for beginning photographers who don't know how to handle the many undesirable lighting situations they may encounter. In *Shooting in Sh*tty Light*, professional photographers Lindsay Adler and Erik Valind cover the top ten worst lighting situations and provide a variety of solutions for each. They explain which solutions are most practical and why one option might be preferable over another, examining such problems as extremely low lighting when no flash is allowed, strong backlight, and the light on an overcast day. Unlike other books that focus on natural light or lighting in general, this book addresses a very real need of beginning photographers, answering the question, "What do I do when the lighting is terrible?" Lindsay and Erik candidly show you the tools at your disposal, demonstrating the techniques essential to getting the job done with minimal fuss. Shows how to deal with ten of the worst lighting situations, such as harsh midday light, extremely low light, and mixed light. Offers real-life examples and practical solutions for handling poor light, such as identifying natural reflectors, bouncing light off a wall, or utilizing flash gels. Features a fun, conversational style to help you conquer the fear of poor lighting and approach any lighting situation with confidence!
