Film cameras - the bodies themselves - have little to do with image quality. Lenses are far more important to image quality than camera bodies. So, as long as your camera has accurate shutter speeds, aperture settings and metering, the brand you pick doesn't really have much of an effect upon the final image. So, then, it appears the model camera you choose is irrelevant. Well, no. The type of film SLR camera you choose is most important to you as the photographer in features and convenience. Comfort has a lot to do with how good you are as a photographer. What I mean by that is that, you choose a camera that feels comfortable in your hands and becomes an extension of your brain as a photographer. This makes it easier to capture the types of images you want.

In some ways, the Nikon F5 is easier to use than the Canon EOS 1N, but it is not nearly as elegant. There's just something about the way the Canon EOS 1N feels in my hands when I'm shooting with it that makes me never want to put it down. In that way, it reminds me much more of the Nikon F4S than the Nikon F5. Practically since I placed the order for the camera, it was inevitable that I would need to write about it. If you are seeking the perfect late-model film SLR camera, you need look no further than the second-to-last pro level Canon EOS 1N. Just load a roll of film, take the camera in your hands and start shooting. You, too, will never want to let it go.

The folks at Nikon produced the first practical digital single-lens reflex camera with the Nikon D1 in 1999, but Canon was hot on their heels, reaching out to the Enthusiast photography market first with the Canon EOS 30D. Always in direct competition with Canon, Nikon pushed to get its first Enthusiast DSLR on the market by 2002, the Nikon D100. It may be old now, but it still is a viable choice for the frugal photographer starting out. In this volume of Shawn M. Tomlinson's Guide to Photography, Nikon D100 takes center stage, showing exactly how good this camera is and why it makes a great first DSLR.

I discovered very quickly that the Pentax 645 was much easier to use than the Hasselblad 500c. I got more photos per roll, too, even though they were smaller than the 6-by-6cm of the 500c. The were/are 6-by-4.5cm, which is where the "645" comes from in the name. One thing I did notice was the clarity and sharpness of that prime lens. To my eyes, it was just as good if not a tiny bit better than the renowned Carl Zeiss Planar 80mm f/2.8 prime lens. I started shooting with the Pentax 645 a lot because unlike the 500c and the two Mamiyas, it isn't a pain to use. It acts a lot like a 35mm SLR or even a DSLR, much more so than my three other medium-format cameras. This book can help to get you started using the Pentax 645.
