Available light, exposure metering, a touch of flash, bounced on-camera flash, off-camera flash, video light, and hard sunlight. To show readers how to manipulate the direction and quality of light, the subject's and photographer's position, and numerous other

variables so as to turn a bad image into a stunning, professional-level portrait. if you know how to use them properly. Acclaimed Boston photographers Lou Jones, Bob Keenan and Steve Ostrowski guide you through the technical and creative aspects of how to get the most out of these powerful tools in this indispensable guide, packed full of inspirational images and comprehensive diagrams of the lighting set ups used to capture them. They are significantly more advanced, lighter and considerably cheaper than a standard flashgun, and have many advantages. They are small (and cheap) enough that a number can be

carried in your kit, and they can be used in combination, triggered wirelessly. They use through-the-lens (TTL) metering, which allows you to use the in-camera LCD and histograms to calculate the required power/direction, rather than havng to use a light meter or trial and error. They use proprietary, dedicated technology (from Canon and Nikon) that means there are no compatability issues. Getting the most out of them, however, remains a mystery - most photographers still just use their speedlights in the same way as a

standard flash gun. This is where this book comes in. **Art and Techniques** Rocky Nook, Inc. *David Busch's Nikon Z50 Guide to Digital Photography* is your all-in-one comprehensive resource and reference for getting the most out of your Nikon Z50 mirrorless camera.
