FEMA has the statutory authority to deliver numerous disaster and non-disaster financial assistance programs in support of its mission, and that of the Department of Homeland Security, largely through grants and cooperative agreements. These programs account for a significant amount of the federal funds for which FEMA is accountable. FEMA officials are responsible and accountable for the proper administration of these funds pursuant to federal laws and regulations, Office of Management and Budget circulars, and federal appropriations law principles.

Operational Templates and Guidance for EMS Mass Incident Deployment

International Medical Publishing
Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment.

The Federal Response to Hurricane Katrina

"What, exactly, is 'National Cyber Security'? The rise of cyberspace as a field of human endeavour is probably nothing less than one of the most significant developments in world history. Cyberspace already directly impacts every facet of human existence including economic, social, cultural and political developments, and the rate of change is not likely to stop anytime soon. However, the socio-political answers to the questions posed by the rise of cyberspace often significantly lag behind the rate of technological change. One of the fields most challenged by this

development is that of 'national security'. The National Cyber Security Framework Manual provides detailed background information and in-depth theoretical frameworks to help the reader understand the various facets of National Cyber Security, according to different levels of public policy formulation. The four levels of government--political, strategic, operational and tactical/technical--each have their own perspectives on National Cyber Security, and each is addressed in individual sections within the Manual. Additionally, the Manual gives examples of relevant institutions in National Cyber Security, from top-level policy coordination bodies down to cyber crisis management structures and similar institutions."--Page 4 of cover.

This intelligence guide was prepared in response to requests from law enforcement executives for guidance in intelligence functions in a post-September 11 world. It will help law enforcement agencies develop or enhance their intelligence capacity and enable them to fight terrorism and other crimes while preserving community policing relationships. The world of law enforcement intelligence has changed dramatically since September 11, 2001. State, local, and tribal law enforcement agencies have been tasked with a variety of new responsibilities; intelligence is just one. In addition, the intelligence discipline has evolved significantly in recent years. As these various trends have merged, increasing numbers of American law enforcement agencies have begun to explore, and sometimes embrace, the intelligence function. This

guide is intended to help them in this process. The guide is directed primarily toward state, local, and tribal law enforcement agencies of all sizes that need to develop or reinvigorate their intelligence function. Rather than being a manual to teach a person how to be an intelligence analyst, it is directed toward that manager, supervisor, or officer who is assigned to create an intelligence function. It is intended to provide ideas, definitions, concepts, policies, and resources. It is a primera place to start on a new managerial journey. Every law enforcement agency in the United States, regardless of agency size, must have the capacity to understand the implications of information collection, analysis, and intelligence sharing. Each agency must have an organized mechanism to receive and manage intelligence as well as a mechanism to report and share critical information with other law enforcement agencies. In addition, it is essential that law enforcement agencies develop lines of communication and information-sharing protocols with the private sector, particularly those related to the critical infrastructure, as well as with those private entities that are potential targets of terrorists and criminal enterprises. Not every agency has the staff or resources to create a formal intelligence unit, nor is it necessary in smaller agencies. This document will provide common language and processes to develop and employ an intelligence capacity in SLTLE agencies across the United States as well as articulate a uniform understanding of concepts, issues, and terminology for law enforcement intelligence (LEI). While

terrorism issues are currently most pervasive in the current discussion of LEI, the principles of intelligence discussed in this document apply beyond terrorism and include organized crime and entrepreneurial crime of all forms. Drug trafficking and the associated crime of money laundering, for example, continue to be a significant challenge for law enforcement. Transnational computer crime, particularly Internet fraud, identity theft cartels, and global black marketeering of stolen and counterfeit goods, are entrepreneurial crime problems that are increasingly being relegated to SLTLE agencies to investigate simply because of the volume of criminal incidents. Similarly, local law enforcement is being increasingly drawn into human trafficking and illegal immigration enterprises and the often associated crimes related to counterfeiting of official documents, such as passports, visas, driver's licenses, Social Security cards, and credit cards. All require an intelligence capacity for SLTLE, as does the continuation of historical organized crime activities such as auto theft, cargo theft, and virtually any other scheme that can produce profit for an organized criminal entity. To be effective, the law enforcement community must interpret intelligence-related language in a consistent manner. In addition, common standards, policies, and practices will help expedite intelligence sharing while at the same time protecting the privacy of citizens and preserving hard-won community policing relationships.~

Originally written for a conference of the Federal Reserve, Gary Gorton's "The Panic of 2007" garnered enormous attention and is considered by many to be the most convincing take on the recent economic meltdown. Now, in *Slapped by the Invisible Hand*, Gorton builds upon this seminal work, explaining how the securitized-banking system, the nexus of financial markets and instruments unknown to most people, stands at the heart of the financial

crisis. Gorton shows that the Panic of 2007 was not so different from the Panics of 1907 or of 1893, except that, in 2007, most people had never heard of the markets that were involved, didn't know how they worked, or what their purposes were. Terms like subprime mortgage, asset-backed commercial paper conduit, structured investment vehicle, credit derivative, securitization, or repo market were meaningless. In this superb volume, Gorton makes all of this crystal clear. He shows that the securitized banking system is, in fact, a real banking system, allowing institutional investors and firms to make enormous, short-term deposits. But as any banking system, it was vulnerable to a panic. Indeed the events starting in August 2007 can best be understood not as a retail panic involving individuals, but as a wholesale panic involving institutions, where large financial firms "ran" on other financial firms, making the system insolvent. An authority on banking panics, Gorton is the ideal person to explain the financial calamity of 2007. Indeed, as the crisis unfolded, he was working inside an institution that played a central role in the collapse. Thus, this book presents the unparalleled and invaluable perspective of a top scholar who was also a key insider.

Points of Distribution . Points of Distribution are centralized locations where the public picks up life sustaining commodities following a disaster or emergency . Commodities usually include shelf stable food and water What are Points of Distribution or PODs? During a disaster, one method of issuing supplies may not be enough. A Local Emergency Management Agency (LEMA) could use other distribution systems or use all of them at once. All three complement each other and provide expanded distribution coverage. For this Guide, we will focus on Points of Distribution or PODs. PODs can accommodate vehicle traffic (drive-thru), pedestrian traffic (walk thru), and mass transit traffic (bus or rail). Each person or vehicle receives a set amount of supplies. The recommended amount is for each person/vehicle to receive enough for a household of three. The amount of supplies provided will differ depending on the type of transportation used. For instance, more supplies are provided to someone in a car than to a pedestrian who must hand carry items."

The Wildland Fire Incident Management Field Guide is a revision of what used to be called the Fireline Handbook, PMS 410-1. This guide has been renamed because, over time, the original purpose of the Fireline Handbook had been replaced by the Incident Response Pocket Guide, PMS 461. As a result, this new guide is aimed at a different audience, and it was felt a new name was in order.

Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns:

- The evolving role of EMS as an integral component of the overall health care system.
- EMS system planning, preparedness, and coordination at the federal, state, and local levels.
- EMS funding and infrastructure investments.
- EMS workforce trends and professional education.
- EMS research priorities and funding.

Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems.

Course Overview This course describes the role, design, and functions of Emergency Operations Centers and their relationships as components of a multi-agency coordination system. The course contains disaster-related examples, activities and case studies that relate to EOC's and multi-agency coordination systems at the local, state and federal levels of government. **Course Objectives:** At the end of the course, students should be able to:

- *Relate EOC operations to National Incident Management System (NIMS) requirements.
- *Describe the role that EOCs play in overall multiagency coordination.
- *Describe the relationship between the EOC and the on-scene Incident Command System (ICS) structure.
- *Identify staffing, information, systems, and equipment needs at the EOC.
- *Determine whether participants' EOC organizations are conducive to effective coordination.
- *Identify potential alternate locations suitable for EOC operations should the primary EOC facility become damaged or inoperable.
- *Create a test, training and exercise plan for critical EOC operations.
- *Develop a strategy and schedule for reviewing EOC resource requirements and technology needs.

This is a print on demand edition of a hard to find publication. Hurricane Katrina, in Aug. 2005, was the costliest hurricane as well as one of the five deadliest storms in U.S. history. It caused extensive destruction along the Gulf coast from central Florida to Texas. Some 22,000 Active-Duty Army personnel assisted with relief-and-recovery operations in Mississippi and Louisiana. At the same time, all 50 states sent approx. 50,000 National Guard personnel to deal with the storm's aftermath. Because the media coverage of this disaster tended toward the sensational more than

the analytical, many important stories remain to be told in a dispassionate manner. This study offers a dispassionate analysis of the Army's response to the natural disaster by providing a detailed account of the operations in Louisiana and Mississippi.
