The shooting attack on the Pulse nightclub in June 2016 claimed the lives of 49 individuals and injured 58 more. It was an event of extreme violence, carnage, and confusion. Yet the Orlando Police Department (OPD) performed with great courage and professionalism, averting a potentially greater loss of life. Recognizing that there were many lessons to be shared and learned from this incident, the OPD asked the COPS Office to conduct a Critical Incident Review of the attack. This Police Foundation

report on the incident review details multiple aspects of the attack and response, including leadership, collaboration, tactics, equipment, training, emergency medical care, officer safety, public information, and community relationships. In so doing, it identifies best practices for planning, training, and procedures in all areas of response to a similar attack or mass casualty event and can serve as a valuable guide to law enforcement or first responders seeking to prepare for similar incidents.

and this textbook embraces that philosophy. It is with this goal in mind that the 16 Firefighter Life Safety Initiatives, developed by the National Fallen Firefighters Foundation, are integrated throughout the text. The features in this textbook will help students take that extra step toward becoming outstanding chief officers. These features include:

- Scenario-Based Learning. You Are the Chief Officer and Chief Officer in Action are found in each chapter to encourage and foster critical thinking skills.
- Practical Tips for the Chief

Officer. Chief Officer Tips and Voices of Experience essays are integrated into each chapter to provide helpful advice from experienced chief officers.

- Level IV Job Performance Requirements. Fire Officer Level IV content is highlighted to discern Level III JPRs from Level IV.
- Walk the Talk. Additional activities encourage students to take what they have learned in the chapter and apply it to their own department.

Naval Institute Press  
Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal, and Federal levels. This primary purpose of this

---

project is to begin the process of providing that guidance as it relates to mass care incident deployment. *Next-Generation Homeland Security Fire Engineering Books* This manual, the Federal Emergency Management Agency FEMA National Incident Management System Third Edition October 2017, provides a common, nationwide approach to enable the whole community to work together to manage all threats and hazards. NIMS applies to all incidents, regardless of cause, size,

location, or complexity. Communities across the Nation experience a diverse set of threats, hazards, and events. The size, frequency, complexity, and scope of these incidents vary, but all involve a range of personnel and organizations to coordinate efforts to save lives, stabilize the incident, and protect property and the environment. Every day, jurisdictions and organizations work together to share resources, integrate tactics, and act

---

collaboratively. Whether these organizations are nearby or are supporting each other from across the country, their success depends on a common, interoperable approach to sharing resources, coordinating and managing incidents, and communicating information. The National Incident Management System (NIMS) defines this comprehensive approach. NIMS guides all levels of government, nongovernmental organizations (NGO), and the private sector to work together to

prevent, protect against, mitigate, respond to, and recover from incidents. NIMS provides stakeholders across the whole community<sup>2</sup> with the shared vocabulary, systems, and processes to successfully deliver the capabilities described in the National Incident Preparedness System.<sup>3</sup> NIMS defines operational systems, including the Incident Command System (ICS), Emergency Operations Center (EOC) structures, and Multiagency Coordination Groups

---

(MAC Groups) that guide how personnel work together during incidents. NIMS applies to all incidents, from traffic accidents to major disasters. The jurisdictions and organizations involved in managing incidents vary in their authorities, management structures, communication capabilities and protocols, and many other factors. NIMS provides a common framework to integrate these diverse capabilities and achieve common goals. The guidance contained in this

document incorporates solutions developed over decades of experience by incident personnel across the Nation.

Security governance in the second decade of the 21st century is ill-serving the American people. Left uncorrected, civic life and national continuity will remain increasingly at risk. At stake well beyond our shores is the stability and future direction of an international political and economic system dependent on robust and continued U.S. engagement. Outdated hierarchical, industrial structures

---

and processes configured in 1947 for the Cold War no longer provide for the security and resilience of the homeland. Security governance in this post-industrial, digital age of complex interdependencies must transform to anticipate and if necessary manage a range of cascading catastrophic effects, whether wrought by asymmetric adversaries or technological or natural disasters. Security structures and processes that perpetuate a 20th century, top-down, federal-centric governance model offer Americans no more than a single point-of-failure. The strategic environment has changed; the system has not. Changes in policy alone will not

bring resolution. U.S. security governance today requires a means to begin the structural and process transformation into what this book calls Network Federalism. Charting the origins and development of borders-out security governance into and through the American Century, the book establishes how an expanding techno-industrial base enabled American hegemony. Turning to the homeland, it introduces a borders-in narrative—the convergence of the functional disciplines of emergency management, civil defense, resource mobilization and counterterrorism into what is now called homeland security. For both policymakers and students a seminal

---

work in the yet-to-be-established homeland security canon, this book records the political dynamics behind the creation of the Department of Homeland Security, the impact of Hurricane Katrina and the ongoing development of what is now called the Homeland Security Enterprise. The work makes the case that national security governance has heretofore been one-dimensional, involving horizontal interagency structures and processes at the Federal level. Yet homeland security in this federal republic has a second dimension that is vertical, intergovernmental, involving sovereign states and local governments whose personnel are not in the President's chain

of command. In the strategic environment of the post-industrial 21st century, states thus have a co-equal role in strategy and policy development, resourcing and operational execution to perform security and resilience missions. This book argues that only a Network Federal governance will provide unity of effort to mature the Homeland Security Enterprise. The places to start implementing network federal mechanisms are in the ten FEMA regions. To that end, it recommends establishment of Regional Preparedness Staffs, composed of Federal, state and local personnel serving as co-equals on Intergovernmental Personnel Act (IPA)

---

rotational assignments. These IPAs would form the basis of an intergovernmental and interdisciplinary homeland security professional cadre to build a collaborative national preparedness culture. As facilitators of regional unity of effort with regard to prioritization of risk, planning, resourcing and operational execution, these Regional Preparedness Staffs would provide the Nation with decentralized network nodes enabling security and resilience in this 21st century post-industrial strategic environment.
