This volume represents the proceedings of the 2013 International Conference on Innovation, Communication and Engineering (ICICE 2013). This conference was organized by the China University of Petroleum (Huadong/East China) and the Taiwanese Institute of Knowledge Innovation, and was held in Qingdao, Shandong,

P.R. China, October 26 - November 1, 2013. The conference received 653 submitted papers from 10 countries, of which 214 papers were selected by the committees to be presented at ICICE 2013. The conference provided a unified communication platform for researchers in a wide range of fields from information technology, communication science, and applied mathematics, to computer science, advanced material science, design and engineering. This volume enables interdisciplinary collaboration between science and engineering technologists in academia and industry as well as networking

internationally. Consists of a book of abstracts (260 pp.) and a USB flash card with full papers (912 pp.).

management systems, service life prediction, maintenance and management strategies, structural health monitoring, non-destructive testing and field testing, safety, resilience, robustness and redundancy, durability enhancement, repair and rehabilitation, fatigue and corrosion, extreme loads, and application of information and computer technology and artificial intelligence for bridges, among others. This volume provides both an up-to-date overview of the field of bridge engineering and significant contributions to the process of making more rational decisions on maintenance, safety, management, life-cycle sustainability and technological innovations of bridges for the purpose of enhancing the welfare of society. The Editors hope that these Proceedings will serve as a valuable reference to all concerned with bridge structure and infrastructure systems, including engineers, researchers, academics and students from all areas of bridge engineering.

Nippon Modern is the first intensive study of Japanese cinema in the 1920s and 1930s, a period in which the country's film industry was at its most prolific and a time when cinema played a singular role in shaping Japanese modernity.

During the interwar period, the signs of modernity were ubiquitous in Japan's urban architecture, literature, fashion, advertising, popular music, and cinema. The reconstruction of Tokyo following the disastrous earthquake of 1923 highlighted the extent of this cultural transformation, and the film industry embraced the reconfigured space as an expression of the modern.

Shochiku Kamata Film Studios (1920-1936), the focus of this study, was the only studio that continued filmmaking in Tokyo following the city's complete destruction. Mitsuyo Wada-Marciano points to the influence of the new urban culture in Shochiku's interwar films, acclaimed as *modan na eiga*, or modern films, by and for Japanese. Wada-Marciano's thought-provoking examinations illustrate the reciprocal relationship between cinema and Japan's vernacular modernity--what Japanese modernity actually meant to Japanese. Her thorough and thoughtful analyses of dozens of films within the cultural contexts of

Japan contribute to the current inquiry into non-Western vernacular modernities.
