This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60 ' s in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational

authorities and economic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy. And pretend as though their own national state were still the "master in its own house" that despite unbridled market economics could continue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the manoeuvring space for shaping national economic policy. Even if many folks today don't want to hear it: The issue is no longer achieving what is socially desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable.

While some writers account for
Japan's postwar economic "miracle"
in terms of a distinctively
Japanese, traditional model of
social organization, the writers
of this study consider Japan's
technological growth to have been
accompanied by convergence toward
modernized social organization.

The authors test both of these
theoretical models. Their data are
derived from a nine-month period
of observation, analysis of
company records, interviews of
personnel, and questionnaire
responses from production, staff,
and managerial employees in three
main Japanese firms. Other firms
were visited more briefly. The
analysis shows that the most
distinctively Japanese variables
have less causal impact on
performance within a firm than do
more universal variables such as
employee status, sex, and job
satisfaction. The authors test
