This book was born from curiosity. To begin with, it was the curiosity of an economist who studied in the 60 ' s in an environment which has subsequently developed from national into global economics. Who has to recognize that politicians, scholars and large segments of society oblivious to supranational authorities and e- nomic globalization forces continue to labour under the notion that they are still fully autonomous and sovereign when shaping national economic policy. And pretend as though their own national state were still the "m- ter in its own house" that despite unbridled market economics could c- tinue to dictate to the economy and companies how to live and in which "rooms". All that has become fiction. The laws of globalization diminish the - noeuvring space for shaping national economic policy. Even if many folks today don ' t want to hear it: The issue is no longer achieving what is soc- politically desirable for the own society but rather the optimal adaptation of society and social benefits to the politically practicable.

This study chronicles the success of the Japanese car in America. Starting with Japan's first gasoline-powered car, the Takuri, it examines early Japanese inventors and automotive conditions in Japan; the arrival of Japanese cars in California in the late 1950s; consumer and media reactions to Japanese manufacturers; what obstacles they faced; initial sales; and how the cars gained popularity through shrewd marketing. Toyota, Honda, Datsun (Nissan), Mazda, Subaru, Isuzu, and Mitsubishi are profiled individually from their origins through the present. An examination follows of the forced cooperation between American and Japanese manufacturers, the present state of the industry in America, and the possible future of this union, most importantly in the race for a more environmentally-sound vehicle.

While some writers account for Japan's postwar economic "miracle" in terms of a distinctively Japanese, traditional model of social organization, the writers of this study consider Japan's

technological growth to have been accompanied by convergence toward modernized social organization. The authors test both of these theoretical models. Their data are derived from a nine-month period of observation, analysis of company records, interviews of personnel, and questionnaire responses from production, staff, and managerial employees in three main Japanese firms. Other firms were visited more briefly. The analysis shows that the most distinctively Japanese variables have less causal impact on performance within a firm than do more universal variables such as employee status, sex, and job satisfaction.
