In 2010, the Bell family, Graeme, Luisa, Keelan and Jessica, set off in their Land Rover on an African adventure which would ultimately afflict them with the overlanding addiction. After touring Southern and East Africa for six months they returned to South Africa, to normal life and the corporate grind . Only touring in their trusty Landy, Mafuta, could still their trembling hands and sate their insatiable hunger. The decision was made to live an alternative travel lifestyle, a decision which would take them and Mafuta to South America where, through a combination of good luck and bad decisions, they circumnavigated the continent for over two years before setting their sights on North America. This is their story, the hard days, the laughter, the breakdowns, the life lessons and the love for each other and the road less travelled."

To extract maximum performance, an engine needs an efficient, well-designed, and

properly tuned exhaust system. In fact, the exhaust system's design, components, and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the parts, and fabricate the exhaust system that delivers the best performance for car and particular application. Master engine builder and award-winning writer Mike Mavrigian explains exhaust system principles, function, and components in clear and concise language. He then details how to design, fabricate, and fit exhaust systems to classic street cars as well as for special and racing applications. Air/exhaust-gas flow dynamics and exhaust system design are explained. Cam duration and overlap are also analyzed to determine how an engine breathes in air/fuel, as the exhaust must efficiently manage this burned mixture. Pipe bending is a science as well as art and you’re shown how to effectively crush and mandrel bend exhaust pipe to fit your header/manifold and chassis combination. Header tube diameter and length is taken into account, as well as the most efficient catalytic converters and resonators for achieving your performance goals. In addition, Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems. When building a high-performance engine, you need a high-performance exhaust system that’s tuned and fitted to that engine so you can realize maximum performance. This comprehensive book is your guide to achieving ultimate exhaust system performance. It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car. No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high-performance applications.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons.

A study viewed the existing motor vehicle sector, structure, and trading conditions and identified and analyzed the best and most significant continuing vocational training practices in Ireland. In 1991, the motor vechicle sector accounted for 6.2 percent of the Gross National Product. Employment in the sector has decreased from an estimated 24,000 in 1988 to 17,000 in 1992. The impact of legislation on the Irish motor industry was significant, requiring those engaged in the industry to cope with a wide variety of laws and statutory instruments. The industry has been well served by the statutory scheme for apprentices. Companies involved in four case studies were a component manufacturer, Nissan, Ford, and Volkswagen/Audi. Each case study described the case, the firm, providers of continuing vocational education, training policy of the firm, evaluation of the training concepts, and conclusions in relation to best practice and normal practice. The case studies demonstrated the organization of work at

distributor level was very professional. At no time in the history of the motor industry in Ireland did polarization of skills (within trades) occur; all-round skills were found necessary for the survival of the dealership. The relationship between franchise dealers and the distributors was very good. The only regulated training was apprenticeship. Indicated trends were static or slightly increased employment in the motor vehicle sector and training needs that correspond to the overall development of vehicle technology and design. (YLB)
