Global value chains (GVCs) are evolving in light of technological developments, such as robotics, big data and the Internet of Things. These technologies are reshaping GVCs and effecting changes on labor markets in developed and developing economies and on supply chain management. This report discusses how technological developments are creating new opportunities for the participation of small and medium-sized enterprises in global value chains and reviews issues related to GVC measurement. The report is a follow-up to the first Global Value Chain Development Report, which revealed the changing nature of international trade when analyzed in terms of value chains and value-added trade. This report is co-published by the World Trade Organization, the Institute of Developing Economies (IDE-JETRO), the Organization for Economic Cooperation and Development, the Research Center of Global Value Chains headquartered at the University of International Business and Economics (RCGVC-UIBE), the World Bank Group, and the China Development Research Foundation.

This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

In the face of constant change, the nature of business must evolve rapidly if it is to remain relevant to society at large. How then should business change to meet the requirements of the 21st century, in which unbridled globalization and technological advancements are having profound effects on the wellbeing and prosperity of both the people and the planet? The achievement of purpose is the key to successful transformation - not just having a purpose, but making that purpose real at every level of the organization. This is the first book to provide a precise description of how companies can put purpose into practice. Based on a groundbreaking research project undertaken jointly between the Saï d Business School at the University of Oxford and Mars Catalyst, the think tank of Mars Inc., it provides a highly accessible account of how companies should determine and implement their corporate purposes. It outlines why corporate purpose is so important and how it can both address the major challenges the world faces today and deliver enhanced performance for business. Fourteen detailed case studies illustrate how companies of different sizes, sectors, and geographies have put purpose into practice and their experiences of doing so. These cases give deep insights into the way in which companies can build purposeful businesses, map and shape their ecosystems, identify failures and problems, align management, and create partnerships to deliver their purposes against which they can measure their performance. The achievement of purpose is a very real issue that every responsible leader in business, finance, and business academia must now face. This book will equip executives, managers, investors, and policymakers with the tools that they require to understand how the notion of corporate purpose should become a corporate reality.

"If good design tells the truth," writes Robert Grudin in this path-breaking book on esthetics and authority, "poor design tells a lie, a lie usually related . . . to the getting or abusing of power." From the ornate cathedrals of Renaissance Europe to the much-maligned Ford Edsel of the late 1950s, all products of human design communicate much more than their mere intended functions. Design holds both psychological and moral

power over us, and these forces may be manipulated, however subtly, to surprising effect. In an argument that touches upon subjects as seemingly unrelated as the Japanese tea ceremony, Italian mannerist painting, and Thomas Jefferson's Monticello plantation, Grudin turns his attention to the role of design in our daily lives, focusing especially on how political and economic powers impress themselves on us through the built environment. Although architects and designers will find valuable insights here, Grudin's intended audience is not exclusively the trained expert but all those who use designs and live within them every day.

The acclaimed sequel to the international bestseller *Flow: an intelligent, inspiring guide to unlocking the evolutionary history of our present consciousness, and "becoming at one with the power that is the universe."* "A book of singular importance and timeliness, one with momentous implications for the future." — Howard Gardner In Mihaly Csikszentmihalyi's bestselling *Flow*, he introduced readers to a radical new theory of happiness. Now in *The Evolving Self*—his breakthrough sequel—he demonstrates how we can understand and overcome our evolutionary shortcomings. Premised on the idea that only through a reckoning with our evolutionary past can we build a stable, meaningful future, *The Evolving Self* covers the challenges associated with our cognitive evolutionary history ("As far as controlling the mind is concerned, we are like a novice driver behind the wheel of a racing car"); the distortions of reality we experience due to genes, culture, and our sense of self; and the central importance of "flow" from an evolutionary perspective as we look toward the future. Erudite, perceptive, and insightful—and more important now than ever, as our consciousnesses are increasingly mediated by electronic devices—*The Evolving Self* is a timely resource for anyone looking to improve our world for ourselves and for generations to come.

The 'Violence against Kosovar Albanians NATO's intervention 1998-1999' case study describes the constraints and dilemmas facing Médecins Sans Frontières teams that witnessed a process of terror and expulsion which they described as the 'deportation' of Kosovar Albanians by Serb forces. It also described MSF's reaction to NATO aerial bombings and the control exercised over the refugee camps by this party to the conflict. Should MSF denounce the violence being committed against Kosovars at the risk of being excluded from access to these people and of encouraging the NATO intervention? Should MSF take a stance on the NATO intervention? What sort of relationship should be established with countries that were committed either militarily (such as NATO members) or politically (Greece) in the conflict and their civil societies? Should MSF raise the alarm about the absence of the UNHCR in the management of the refugee camps, at the risk of reinforcing this marginalization? Is it justifiable to carry out an assessment mission that sacrifices the principle of operational independence, by invoking an interpretation of the principle of impartiality that implies a responsibility to assist victims on both sides of a conflict?

Infectious diseases as a specialty suffers from many unique challenges stemming from lower salaries compared to other medical specialties and difficulty keeping the younger demographic within the field. With emerging infections, new diagnostic and research tools, and changing migration patterns, these problems are amplified; infectious disease specialists are in higher demand than ever with fewer and fewer specialists available to support patients and colleagues outside of the field. To meet these increasing challenges, it is vital for the workforce of the future to have the best training possible. This book aims to provide this support. As trainees, all physicians face clinical infectious disease scenarios on a daily basis. They receive basic training in common infections, giving them the tools needed for initial diagnostic studies and empiric treatment. This approach, however, still leaves them struggling with nuances of treating common infections, infections that masquerade as other diseases, rare infection, advanced diagnostics, complicating medical conditions, and a wide range of medical complexities. Important clinical microbiology details and host susceptibility risks will be highlighted when discussing uncommon infections. Each chapter begins by defining a distinct clinical infectious

disease problem and the most common cause(s). The next section of each chapter identifies the key questions to consider, including other possible pathogens, medical history, alternate microbiologic diagnoses, instances of unexpected result. This book is the only academic text designed specifically to meet this challenge by targeting learners at all levels. To do this, the text incorporate 30-40 common clinical infectious disease scenarios in both adult and pediatric hosts. It includes easy-to-access "tips and tricks" for when to look further or consider possibilities that are unusual that is useful for someone who is new to the information or has limited experience within infectious diseases. The text heavily features teaching and learning tools, including call out boxes that prioritizes infectious etiologies, host risk factors, important microbiologic clues, and important clinical history clues. The text also includes review questions and quiz-like challenges to reinforce the concepts. Written by experts in the field Clinical Infectious Diseases is the most cutting-edge academic resource for all medical students, fellows, residents, and trainees, including infectious disease specialists in both adult and pediatric care, internal medicine specialists, and hospitalists.
