A searing portrait of Muslim life in the West, this “profound and intimate” memoir captures one man’s struggle to forge an American Muslim identity (Washington Post) Haroon Moghul was thrust into the spotlight after 9/11, becoming an undergraduate leader at New York University’s Islamic Center forced into appearances everywhere: on TV, before interfaith audiences, in print. Moghul was becoming a prominent voice for American Muslims even as he struggled with his relationship to Islam.

In high school he was barely a believer and entirely convinced he was going to hell. He sometimes drank. He didn’t pray regularly. All he wanted was a girlfriend. But as he discovered, it wasn’t so easy to leave religion behind. To be true to himself, he needed to forge a unique American Muslim identity that reflected his beliefs and personality. *How to Be a Muslim* reveals a young man coping with the crushing pressure of a world that fears Muslims, struggling with his faith and searching for intellectual forebears, and suffering the onset of bipolar

disorder. This is the story of the second-generation immigrant, of what it’s like to lose yourself between cultures and how to pick up the pieces. [Ferrari 312T 1975 to 1980 \(312T, T2, T3, T4, T5 & T6\)](#) Haynes Publishing UK  
Reissued with a new preface by the author on the fiftieth anniversary of the Apollo 11 journey to the moon The years that have passed since Neil Armstrong, Buzz Aldrin, and Michael Collins piloted the Apollo 11 spacecraft to the moon in July 1969 have done nothing to alter the fundamental wonder of the event: man reaching the moon remains one of the great events—technical and spiritual—of our lifetime. In

---

Carrying the Fire, Collins conveys, in a very personal way, the drama, beauty, and humor of that adventure. He also traces his development from his first flight experiences in the Air Force, through his days as a test pilot, to his Apollo 11 space walk, presenting an evocative picture of the joys of flight as well as a new perspective on time, light, and movement from someone who has seen the fragile earth from the other side of the moon.

The Kingdom of Faerie has been sleeping for centuries, through the ages of iron and metal and glass. But now technology has failed, the digital world is over and, finally, something has disturbed the fae from slumber...Tabitha is a misfit. She's hopelessly naïve, more comfortable in the pages of her books than talking to the other villagers, and spends most of her time chattering away to the river that runs through her village. The rest of the village all agree - she is definitely odd. But

when the little folk start wreaking havoc and something old and terrible wakes up in the river, it falls to Tabitha to leave home in search of the fabled Iron City, home to the only humans who still have any memory of the fae and who might be able to help her village. Tabitha wasn't born an adventurer. And with only a simple book of fairytales to help her navigate this strange new world full of faeries and sprites and pixies, she quickly finds herself way out of her depth...The River Witch is the first in a new fairytale-inspired fantasy series set in post-technology Britain. Faerie is waking up again - don't miss it when it does.

Established in 1958 in response to Russia's Sputnik 1, launched on 4 October as the world's first artificial satellite, NASA - the National Aeronautics and Space Administration - emerged out of the National Advisory Committee for Aeronautics which had been formed in 1915. The NASA Operations Manual tells the story of America's civilian space agency, the facilities it operates, where they are and what they do. It explains how much NASA costs the American taxpayer and looks at what it returns to the taxpayer in

benefits to the economy. NASA has forged a niche in modern history that extends beyond the realisation of stage-old dreams to leave Earth and explore the heavens - it has become a synonym for achievement, performance and greatness, in setting goals and achieving them, in failing and learning how to recover, in connecting people around the world with international programmes to explore our solar system and live our ambitions, and in improving the lives of people everywhere through its inventions, discoveries, its

technology and its engineering. Sixty years after NASA took hold of the reins of US civilian space programmes, the agency has a bold vision for great and ambitious goals, taking humans back to the Moon and on to Mars, perhaps visiting an asteroid, or setting up an interplanetary transport system on the way. And all the time, providing inspiration for a new generation. With more than 300 photographs, line drawings and charts, this book tours the United States, describing the centres of excellence and the facilities where rockets

---

are tested, satellites are built and humans prepare for space. With summary review of research laboratories, test rigs, experimental platforms and engineering facilities, this book describes the 60 years of NASA as it has evolved through changing requirements and expanding capabilities, building on the past and preparing for a bold future.

In Mark's Way, college history professor Mark Price is obsessed with revenge when his

reason for living is violently taken from him. His history of violence he'd experienced as a member of a covert military unit during the Vietnam era is reawakened. Roe Estes is a young woman drawn into a life of sex and drugs, who has lost her pride, dignity and will to live. And Jim Herbert, a good man, is close to losing his sanity as he sits on Florida's death row,

waiting to die, for a crime he is totally innocent of. In Mark's way, these three people are connected by two intertwined story lines occurring over a ten-year period. Mark Price brings into question the sometimes, fine line between justice and revenge as he ultimately finds peace while risking his own life helping Roe regain her strength and pride. The reader will appreciate Roe and her

---

metamorphosis into a strong woman who regains control of her own destiny. Ultimately, they work together trying to prove the innocence of Jim Herbert. A Columbian drug dealer, a prominent Orlando surgeon, a shady attorney and a leader of a biker gang, all play a critical part in the story.

Night after night for six years of war, RAF Bomber Command's squadrons pounded away at the cities of Nazi Germany in a determined effort to bring the Third Reich to its knees. Pitted against Bomber Harris's aircrews and aircraft were some of the most effective and deadly defenses the world had seen up until then. For Bomber Command to launch a 'maximum effort' raid on the Ruhr by night, or a low-level strike on a target in enemy occupied Europe by day, it involved a huge

amount of planning. Who decided what to bomb? Why, when and where were bomber airfields built? How was the overall command structure organized, from the Air Council down to individual squadron level? Who were the commanders and who were the men that made up the rank and file of the Command? How did the RAF train its bomber crews? What aircraft did they fly and what weapons did they use? How was a raid planned and once it was launched what happened? How was the effectiveness of a raid and bomber tactics analyzed afterwards? How

did the RAF go about tracing the 'missing' (47,000 men 'failed to return' from operations)? How were damaged bombers repaired and made good again for operations? Useful appendices include a Bomber Command War Diary listing key events 1939-1945, squadrons and their commanders, an a-to-z of bomber airfields, and sample orders of battle from 1939, 1943 and 1945. Fully illustrated with some 300 photographs, the RAF Bomber Command Operations Manual gives a compelling insight into the workings of one of the most

powerful instruments of 20th century warfare. The Physics of NASCAR Haynes Publishing UK Here is the real Steve McQueen. From abandoned child to star of box office smashes, McQueen is the definitive (and sensitive) portrait of one of America's most enigmatic stars. 16 pages of photos.
