Connectivity and the Mobility Industry Edmunds Publications Thanks to advances in computer technology in the last twenty years, navigation system, cabin environment control, ACC, advanced driver assistance system (ADAS) and automated driving have become a part of the automobile experience. Improvement in technology enables us to design these with greater flexibility and provide greater value to the driver

(human centered design). To achieve this, research is required by laboratories, automobile and auto parts manufacturers. Although there has been a lot of effort in human factors research and development, starting from basic research to product development, the knowledge and experience has not been integrated optimally. The aim of this book is to collect and review the information for researchers, designers and developers to learn and apply

them for further research and development of human centered design of future automotive technologies. Automotive human factors include psychological, physiological, mathematical, engineering and even sociological aspects. This book offers valuable insights to applying the right approach in the right place.

Over the past ten years, thousands of church leaders have successfully transformed congregations with the principles from the original Five Practices: Radical Hospitality, Passionate Worship, Intentional Faith Development, Risk-Taking Mission and

Service, and Extravagant Generosity.

However, much has changed in the world and the Church. Leaders have discovered new ways to implement the Five Practices in settings that were not imagined when the original book was released. This revised and updated edition of the ministry leadership classic includes a significant amount of new material. How are the Practices being used now, in new types of congregations? How has each Practice changed in the last decade? What new issues or concerns do leaders need to consider in relation to each Practice? This revision provides leaders with a 'next step' look at the original practices. Schnase gathered ideas and other content from ministry leaders who have been using the Five Practices, and explains how those ideas work, how leaders adapted the principles to their own settings, and how they expanded them. A new preface redefines 'Congregations' given their evolving nature. When the original book was written, the new forms of Christian community either did not exist or were barely known. The Five Practices are, however, just as essential to the new types of congregations as they were to the traditional church. Since the original book, there is more variety, diversity, and experimentation in worship. The revised Five Practices includes material based on these new forms. Small group study has always been important for intentional faith development. But since the original book, the

nature of those groups has transformed to include secular settings and a wide variety of affinities profoundly affecting how faith leaders approach issues of faith development, and in many cases radically changes what they offer in their communities. Imagine the topic of Risk-Taking Mission and Service before Black Lives Matter, the Syrian refugee crisis, and the Trump administration. This new version gives instruction and specific ideas for how we might best serve today's world.

Porting heads is an art and science. It

takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available.

The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies.
