The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway.

What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Here is the first in-depth analysis and comparison of U.S. policy in two seminal conflicts of our recent history: the Cold War and the Global War on Terrorism. Unlike previous publications, which deal with each conflict separately, *Two American Crusades* treats the two as a seamless web, from the passions of the medieval Crusades through the long

twilight struggle of the Cold War to the campaign against al Qaeda and ISIS stemming from the rise of radical political Islam. National security and foreign policy professionals, members of the academic community, and general readers alike will benefit from the insights revealed in this book that exert a profound influence on current international affairs and America's role. *Two American Crusades* also illustrates why a peace dividend continues to elude the United States. **REVIEWS and WORDS OF PRAISE** A history of American foreign policy that is sweeping in scope and penetrating in its analysis. *Two American Crusades* makes two original contributions. First, it surveys and compares America's role in the Cold War and the Global War on Terrorism. Second, it argues that U.S. policy was driven by a crusading impulse to promote its democratic values around the world, incurring a high cost in blood, treasure, and moral authority. *Two Crusades* concludes by stating that the war on terrorism is veering away from the battlefield as America retrenches, re-evaluates its role in the world, and pursues a less aggressive foreign policy. --Benjamin

B. Fischer, former Chief Historian of the Central Intelligence Agency A sweeping and valuable examination of the America's two momentous struggles since World War II—the Cold War against the Soviet Union and the Global War on Terrorism against al Qaeda and other networks. Dr. Leighton provides a sobering account of these protracted conflicts and the legacies they left behind. --Seth G. Jones, Harold Brown Chair at the Center for Strategic and International Studies (CSIS) and author of *A Covert Action: Reagan, the CIA, and the Cold War Struggle in Poland*. A meticulously researched and convincingly argued work that makes a major contribution to our understanding of the past 75 years of American history. Many have written about the Cold War and, separately, the Global War on Terrorism. Dr. Leighton takes an innovative approach and treats the two as a seamless continuum. --Igor Lukes, Professor of History and International Relations, Boston University, and author of *On the Edge of the Cold War: American Diplomats and Spies in Postwar Prague*. The demise of the Soviet Union dovetailed with the advent of Islamic

terrorism. Dr. Leighton expertly describes these conflicts, provides experienced analyses about the past, and projects the difficulties ahead. --Richard R. Valcourt, Editor-in-Chief Emeritus, International Journal of Intelligence and CounterIntelligence Academe has long kept the Cold War and the Global War on Terrorism in separate silos. Dr. Leighton breaks new ground by revealing the nexus between the two crusades. She critiques a US strategy that defeated the Soviet army in Afghanistan but left the Islamist fighters there free to wage a jihad against the United States. The result was 9/11, which in turn triggered the Global War on Terrorism. --Dr. Leif Rosenberger, Adjunct Professor at the Graduate School of Public and International Affairs, University of Pittsburgh, former Chief Economist at CENTCOM and PACOM, and author of *Economic Statecraft and US Foreign Policy: Reducing the Demand for Violence*. An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In

Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.

Ant Anstead's *Building a Special* brings the Haynes story full circle, coming 61 years after the original *Building a 750 Special* was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series *Ant Anstead Master Mechanic*, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build

of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal. 4x4 Suspension Handbook Consumer Guide Books Pub S40 Saloon & V50 Estate, inc. special/limited editions. Originally created to homologate the new Boss 302 engine for SCCA Trans-Am racing, the Boss 302 Mustang was built in limited numbers for the street. Designed by legend Larry Shinoda, the Boss cars were easily distinguished from their less potent stable mates by their unique front and rear spoilers, rear window slats, and the omission of the standard Mustang's (fake) rear fender brake ducts. Also standard was a shaker hood scoop and bold graphics. Though Mustang performance faded to all-time lows as the 1970s rolled on, there was good news on the way. The pairing of the venerable 302 Windsor engine with the new Fox-body platform for the 1979 Mustang might not have seemed significant at the time, but it was the first edition of what would become a performance institution in the late 20th century: the 5-liter Mustang was an overwhelming force on the streets and tracks through the end of its production in 1995. With no small amount of fanfare, Ford is paying homage to its performance past with the re-introduction of

the 5.0 liter powerplant in the Mustang GT for 2011.
