When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst."

The Demographic Challenge: A Handbook about Japan SAN'EISHOBO PUBLISHING CO.,

This prize-winning book is both an illustrated tour of a Tokyo rarely seen in Japan travel guides and an artist's warm, funny, visually rich, and always entertaining graphic memoir. Florent Chavouet, a young graphic artist, spent six months exploring Tokyo while his girlfriend interned at a company there. Each day he would set forth with a pouch full of color pencils and a sketchpad, and visit different neighborhoods. This stunning book records the city that he got to know during his adventures. It isn't the Tokyo of packaged tours and glossy guidebooks, but a grittier, vibrant place, full of ordinary people going about their daily lives and the scenes and activities that unfold on the streets of a bustling metropolis. Here you find businessmen and women, hipsters, students, grandmothers, shopkeepers, policemen, and other urban types and tribes in all manner of dress and hairstyles. A temple nestles among skyscrapers; the corner grocery anchors a diverse assortment of dwellings, cafes, and shops--often tangled in electric lines. The artist mixes styles and tags his pictures with wry comments and observations. Realistically rendered advertisements or posters of pop stars contrast with cartoon sketches of iconic objects or droll vignettes, like a housewife walking her pet pig, a Godzilla statue in a local park, and an urban fishing pond that charges 400 yen per half hour. This very personal guide to Tokyo is organized by neighborhood with hand-drawn maps that provide an overview of each neighborhood, but what really defines them is what caught the artist's eye and attracted his formidable drawing talent. Florent Chavouet begins his introduction by observing that, "Tokyo is said to be the most beautiful of ugly cities." With wit, a playful sense of humor, and the multicolor pencils of his kit, he sets aside the question of urban ugliness or beauty and captures the Japanese essence of a great city in this truly vital portrait.

This Handbook explores the challenges population change poses to today's Japan. Bringing together a roster of internationally renowned scholars, it is the first publication in English that deals with Japan's demographic crisis in a comprehensive way, addressing social, economic, political, social security and cultural aspects of Japan's transition.

The Road To Berlin Focus On: 100 Most Popular Station Wagons

As the University of Michigan Center for Japanese Studies reflected on the deteriorating position of the domestic auto industry in the fall of 1980, and the strong competitive threat being posed by the Japanese automakers, we were struck by the extraordinary low quality of the public discussion of these critical issues. The national importance of the issues seemed only matched by the superficiality of the analyses being offered. The tendency to think in terms of scapegoats was particularly evident. The Japanese as the basic cause of our problems has been a particularly notable theme. To be sure, cooperation with the Japanese in formulating a rational overall trade policy may be an important part of the solution. It has also been fashionable to blame it all on American auto industry management for not concentrating on the production of small cars when "everyone knew" that was the thing to do. Alternatively, government meddling was blamed for all our problems. Clearly, the complex problem we faced required more penetrating analyses. It seemed therefore, that the time was ripe for a public seminar which moved beyond the rhetoric of the moment and probed some of the deeper causes of our problems and possible directions for future policy. In holding the January 1981 auto conference, the Center took it as their task to begin addressing the critical issues facing the industry, with particular, but not exclusive, attention to examining the role of the Japanese auto industry. They had in mind not to simply conduct a rational discussion of the trade issue but to probe the sources of Japanese competitive strength, especially those features whose study might profit them. In these proceedings, they bring those discussions to a wider audience. Question and answer sessions at the conference were necessarily short and a few speakers delivered abbreviated remarks; this volume restores a number of omissions, and provides additional answers to some pertinent questions put by the audience. The Center hopes to encourage the serious problem-solving these complex issues demand. Far too much time has been spent trying to fix the blame. [intro]

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

Enough about the oil problem. Here's the solution. Over a few decades, starting now, a vibrant US economy (then others) can completely phase out oil. This will save a net \$70 billion a year, revitalize key industries and rural America, create a million jobs, and enhance security. Here's the roadmap? independent, peer-reviewed, co-sponsored by the Pentagon? for the transition beyond oil, led by business and profit.

Japan, that special set of islands, has a constant ability to amaze. Time and time again in the past few decades the country, its society, and its economy have appeared to be set on one particular course, or to be headed for an inevitable crisis, or in some important respect to be unchangeable. and yet time and time again Japan has spring a big surprise, astonishing observers, whether Japanese or non Japanese, by its ability suddenly to switch direction. That is exactly what has been happening as Japan has entered the final decade of the 20th century.
