This White Paper sets out a programme of reform to the UK's system for the regulation of health professionals. It contains a number of proposals with the aim of establishing a transparent system that can be seen to be independent and accountable and introduces the principle of revalidation so that registered professionals will have to demonstrate their continued fitness to practice. There will be changes in the way that problems will be handled. In the adjudication of fitness to practise cases panels should use civil standards of proof rather than the criminal standard and the Council for Healthcare Regulatory Excellence should have enhanced powers to supervise the regulators' handling of such cases. The Government agrees that there should be a separation of investigation and prosecution from adjudication and will work with the GMC to establish an independent body to adjudicate on fitness to practice cases involving the medical profession. Other topics covered in this document are: education and the role of regulatory bodies; information about health professional and regulation for emerging professions.

**How Stuff Works**

This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.
