This book presents the papers from the
Internal Combustion Engines: Performance,
fuel economy and emissions held in
London, UK. This popular international
conference from the Institution of
Mechanical Engineers provides a forum for
IC engine experts looking closely at
developments for personal transport
applications, though many of the drivers of
change apply to light and heavy duty, on

and off highway, transport and other sectors.
These are exciting times to be working in the
IC engine field. With the move towards
downsizing, advances in FIE and alternative
fuels, new engine architectures and the
introduction of Euro 6 in 2014, there are
plenty of challenges. The aim remains to
reduce both CO2 emissions and the
dependence on oil-derivate fossil fuels whilst
meeting the future, more stringent
constraints on gaseous and particulate
material emissions as set by EU, North
American and Japanese regulations. How
will technology developments enhance
performance and shape the next generation
of designs? The book introduces
compression and internal combustion
engines ' applications, followed by chapters

on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
