Studies in Environmental Science, Volume 21: Air Pollution by Nitrogen Oxides presents the proceedings of the US – Dutch International Symposium on Nitrogen Oxide, held in Maastricht, The Netherlands on May 24 – 28, 1982. This book provides research and development information related to the national and international policies on nitrogen oxides in the United States, The Netherland, Japan, and elsewhere in Europe. Organized into five sessions encompassing 94 chapters, this volume begins with an overview of the atmospheric cycle of nitrogen oxide in terms of source strength, destruction rates, and atmospheric chemistry. This text then examines the fundamental physical and chemical processes involved in the formation of nitrogen oxides. Other chapters consider the regional pulmonary deposition of nitrogen dioxide in man, guinea pigs, rats, and rabbits by using a general mathematical model formulation for the transport of gases in the lungs. This book discusses as well the emission control methods and systems with low nitrogen oxide capability for possible application in The Netherlands and other parts of Europe. This book is a valuable resource for government administrative officials, research scientists, air pollution control experts, and students.
