[Nitro Engine Explode
- YouTube](#)

A nitro engine,
powered by a mixture
of nitro-methane and
methanol, produces

considerably more

power than an

equivalent sized petrol

engine. This allows

them to be smaller and

lighter. However, this

extra power comes at a

cost; nitro engines are

known to wear out

quicker and require

more frequent

rebUILds and tinkering
than the more robust

petrol engines.

The nitro Harley

engines are also

feature a 45-degree bank but run a single-pin PRP billet crankshaft, resulting in offset cylinders with conventional 8.5-inch automotive-style rods mounted side-by-side on the crank ' s rod journal.
