This analysis is directed at the heat & frost insulator who specializes in the installation & maintenance of insulation systems for the conservation of energy and control of the environment in buildings and premises requiring temperature control, heat transfer, sound barriers, fire protection, and asbestos abatement. The analysis identifies tasks and sub-tasks performed by an insulator, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, basic job skills, industrial application, commercial application, asbestos abatement, spraying insulation materials, and fire stopping & smoke seals. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The appendix includes a list of tools and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).
