Noise Control In Ic Engine Seminar Report

Provides systematic methodology for investigating, evaluating, and designing controls for noise emanating from internal combustion engines, or from the addition of necessary components, with emphasis on control at the source of the noise.

Deals with noise control on a component-by-component basis. Discusses control along the path of propagation, the effects of operating parameters on the noise level that an engine can produce, and silencers as a means of noise control.

NOISE REDUCTION SYSTEM IN IC ENGINE - SlideShare

It is an acoustic soundproofing device designed to reduce the noise of the sound pressure created by the engine. Noise reduction is one of the highest prior target for IC engine development because of the more and more strict engine noise limits. Internal combustion engine noise has been drawing significant attention from automotive manufacturers.

Noise Control for Internal

Combustion Engine Exhaust

Noise Control for Internal Combustion Engine Exhaust [20302] Introduction FSAE rules dictate engine noise under 110dB. Current Passive Noise Control device (Glass pack) holds engine sound from wide range above and below 110dB Current technology is not tuned for optimal noise reduction or engine performance Design Objectives
