Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the

trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Self-Made: How to Win by Investing in Yourself is a great book that provides multiple ways you can generate cash flow that will fund your IRA account or your life, if you choose to not use an IRA. This book is broken down into five individual chapters that help you get an understanding of finance and financial products in the market. Chapter One is dedicated to giving you a basic understanding of the principles of finance. These five principles are like a guide to the rest of the book and open your eyes to being a boss instead of a consumer. Chapter Two goes into the players in the financial markets who either provide financing or make the markets. You get to see the big institutional players such as insurance companies, banks, and others that are involved on Wall Street and Main Street. Chapter Three starts the meat and potatoes portion of the book, where you are introduced to the self-directed IRA and how you can benefit from converting to one. I give you information on the difference between a traditional IRA, Roth IRA, and one where you control what you purchase (self-directed IRA). This chapter is the whole basis for the rest of the book. Chapter Four is all about various products and ways you can generate cash flow for your account or yourself, if you choose. I go over various ways you can get into real estate, products such as annuities, insurance, life settlements, and so much more. This chapter is about creating a long-term strategy and describes some short-term products with varying risks; it is also the longest portion of the book as it's about chess, not checkers. Chapter Five ends with ways you can protect your newfound wealth and pass it on if you're looking to create generational wealth. I give you information in creating trusts, having insurance, and even ways to keep your ex from getting a check if you're divorced. All of the other chapters in this book are packed with great information for anyone seeking to get out of the rat-race, and I suggest you read and tell a friend to tell a friend.

In his new book, Riccardo Rebonato introduces financial professionals to the practical and subtle use of the concepts of volatility (the degree of randomness in a price movement) and correlation (the relationship between the changes in value of two financial assets) in the pricing of complex options. By explaining this approach in clear and accessible terms, the author provides traders, risk managers, financial professionals and students with the tools to undertake an effective investigation of option pricing models both at the qualitative and quantitative level. Dr Riccardo Rebonato is Head of Group Market Risk for the NatWest Group, London, UK. He holds Doctorates in Nuclear Engineering and Science of Materials/Solid State Physics. He has recently been appointed Lecturer in Mathematical Finance at Oxford University. Prior to joining NatWest, he was, at the same time, Head of the Complex Derivatives Trading desk and of the Complex Derivatives Research Group at Barclays Capital, where he worked for nine years. Before that he was a Research Fellow in Physics at Corpus Christi College, Oxford He is the author of the highly successful book Interest-Rate Option Models (Wiley, second edition 1998) and has published several papers on finance in academic journals. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

Introductory Geographic Information Systems Computing McGraw-Hill

Geospatial technologies in general — and Geographic Information Systems (GIS) in particular — are becoming increasingly important in our society. GIS technology is used to identify the optimal routes for emergency vehicles, to determine the best locations for various businesses, schools, and facilities, to monitor the growth and expansion of urban areas as a way to manage natural resources, and much more. Principles of Geographic Information Systems by John Jensen and Ryan Jensen is an ideal introduction for those who know very little about geographic information systems and spatial analysis. Relatively complex GIS principles are introduced in basic terms, often using graphics to communicate principles rather than complex mathematical equations. Content is not geared toward any single commercial GIS software program, and the book's timely, practical examples and extensive visual format appeal to today's students. This text can be used at the undergraduate or graduate level in one or two semester courses in

Introductory and Intermediate GIS, yet can also be useful for professionals looking to increase their knowledge in this subject area. Kasher in the Rye GPO FCIC

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But KASHER IN THE RYE is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to Oakland, California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying situations.
