Historical scholarship is currently undergoing a digital turn. All historians have experienced this change in one way or another, by writing on word processors, applying quantitative methods on digitalized source materials, or using internet resources and digital tools. Digital Histories showcases this emerging wave of digital history research. It presents work by historians who – on their own or through collaborations with e.g. information technology specialists – have uncovered new, empirical historical knowledge through digital and computational methods. The topics of the volume range from the medieval period to the present day, including various parts of Europe. The chapters apply an exemplary array of methods, such as digital metadata analysis, machine learning, network analysis, topic modelling, named entity recognition, collocation analysis, critical search, and text and data mining. The volume argues that digital history is entering a mature phase, digital history 'in action' where its focus is shifting from the building of resources towards the making of

new historical knowledge. This also involves novel challenges that digital methods pose to historical research, including awareness of the pitfalls and limitations of the digital tools and the necessity of new forms of digital source criticisms. Through its combination of empirical, conceptual and contextual studies, Digital Histories is a timely and pioneering contribution taking stock of how digital research currently advances historical scholarship.

Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

Foldable Flex and Thinned Silicon Multichip Packaging Technology presents newly emerging methods used to make stacked chip packages in the so-called 2-1/2 D technology (3-D in physical format, but interconnected only through the circuits on folded flex). It is also being used in single chip packages where the thinness of the chips and the flex substrate made packages significantly thinner than through any other means. Much of the work in this field has not been widely disseminated other than by papers presented at conferences and workshops. This

book is organized to report on the developments in this technology, but with special additional material and emphasis. The intent is to do more than report on present state of the art. It is intended as an advocacy book, pointing out the reasons for 3-D assemblies, the reasons for Silicon-in-a-Package multichip modules, and the commercial availability of the techniques. The contributing authors, all leaders in this technical field, explore the needs, reveal the state of development and production, and point to changes in technology that can bring this technology into wider use for more complex applications. It is an advocacy book in this respect - advocacy for the use of a technology that is already mature, and advocacy for exploring ways to make it even more capable for the future. It will also do more than discuss the present; it will point out the deficiencies of the constructions, the needed availability of good flex material, the use of newer flex materials, such as LCP, and the implications from the use of the Integrated Mesh Power Systems to enhance the capability for future designs. Lastly it will discuss the serious problem of heat removal if multiple microprocessors are included.

During the early modern centuries, gunpowder and artillery revolutionized warfare, and armies grew rapidly. To sustain their new military machines, the European rulers turned increasingly to their civilian subjects, making all levels of civil society serve the needs of the military. This volume examines civil-military interaction in the multinational Swedish Realm in 1550-1800, with a focus on its eastern part, present-day Finland, which was an important supply region and battlefield bordered by Russia. Sweden was one of the frontrunners of the Military Revolution in the 16th and 17th centuries. The crown was eager to adapt European models, but its attempts to outsource military supply to civilians in a realm lacking people, capital, and resources were not always successful. This book aims at explaining how the army utilized civilians - burghers, peasants, entrepreneurs - to provision itself, and how the civil population managed to benefit from the cooperation. The chapters of the book illustrate the different ways in which Finnish civilians took part in supplying war efforts, e.g. how the army made deals with businessmen to finance its military campaigns and how town and country people were obliged to lodge and feed soldiers.

Approaching the settlement of our Moon from a practical perspective, this book is well suited for space program planners. It addresses a variety of human factor topics involved in colonizing Earth's Moon, including: history, philosophy, science, engineering, agriculture, medicine, politics & policy, sociology, and anthropology. Each chapter identifies the complex, interdisciplinary issues of the human factor that arise in the early phases of settlement on the Moon. Besides practical issues, there is some emphasis placed on preserving, protecting, and experiencing the lunar environment across a broad range of occupations, from scientists to soldiers and engineers to construction workers. The book identifies utilitarian and visionary factors that shape human lives on the Moon. It offers recommendations for program planners in the government and commercial sectors and serves as a helpful resource for academic researchers. Together, the coauthors ask and attempt to answer: "How will lunar society be different?"
