Digital convergence is redefining industries, and putting information, knowledge and collaboration at the heart of strategic leadership and management. In the face of such change it is those leaders who can 'orchestrate' a complex network of employees, customers and suppliers in a single ongoing learning experience that will succeed.

Exploring four learning roles for customers (information acquirer; explorer; performer; inventor) and orchestrators (conductor; architect; auctioneer; promoter), Business Orchestration provides a strategic view of how to harness digital convergence by mobilizing and integrating the resources of other companies to create business value.

The cell phone is the fastest-selling consumer electronic in the world. On a global basis, over 800 million cellular telephones are sold yearly. More camera-equipped cell phones are sold each year than stand alone digital cameras. Rapid development of new technologies is leading to ever more versatile, multipurpose mobile devices, including 3G Internet-enabled cell phones and PDAs. Meanwhile, wireless networking and wireless Internet access are developing and expanding on a global basis at a rapid rate. Booming technologies include such 802.11 standards as Wi-Fi and WiMax, as well as Ultra Wide Band (UWB) and Bluetooth. Telematics, intelligent transportation systems (ITS) and satellite radio will soon create an entertainment, navigation and communications revolution within automobiles and trucks. Meanwhile, RFID (radio frequency identification) will revolutionize wireless tracking, inventory and logistics at all levels, from manufacturing to shipping to retailing. These developments are creating

challenges for legacy companies and opportunities for nimble marketers and managers. Plunkett's Wireless, Wi-Fi, RFID & Cellular Industry Almanac 2008 covers such sectors. Our coverage includes business trends analysis and industry statistics. We also include a wireless and cellular business glossary and a listing of industry contacts, such as industry associations and government agencies. Next, we profile hundreds of leading companies. Our 350 company profiles include complete business descriptions and up to 27 executives by name and title.

The Hidden Treasure Book McFarland

This book presents emerging technology management approaches and applied cases from leading infrastructure sectors such as energy, healthcare, transportation and education. Featuring timely topics such as fracking technology, electric cars, Google's eco-friendly mobile technology and Amazon Prime Air, the volume's contributions explore the current management challenges that have resulted from the development of new technologies, and present tools, applications and frameworks that can be utilized to overcome these challenges.

Emerging technologies make us rethink how our infrastructure will look in the future. Solar and wind generation, for example, have already changed the dynamics of the power sector. While they have helped to reduce the use of fossil fuels, they have created management complications due to their intermittent natures. Meanwhile, information technologies have changed how we manage healthcare, making it safer and more accessible, but not without implications for cost and administration. Autonomous cars are around the corner. On-line education is no longer a myth but still a largely unfulfilled opportunity. Digitization of car ownership is achievable thanks to emerging business models leveraging new communication technologies. The major challenge is how to evaluate the relative costs and benefits of these technologies. This book offers insights from both researchers and industry practitioners to address this challenge and anticipate the impact of new technologies on infrastructure now and in the future.

A sisters' secret. A mysterious phenomenon. A murder that ties it all together. The small town of Mountain Springs, Pennsylvania thrives on the snow geese migration. Each year, the birds flock to the dam, and the tourists follow, filling up Linnet's Bed and Breakfast. But one morning Linnet wakes up to discover hundreds of dead geese by the B&B and her life is thrown into the media frenzy when her father—a former ornithology professor—is asked to study the case. As the tourists cancel their plans and Linnet's father's health grows increasingly worse, the last thing she expects is to see her estranged sister, Myna, on her doorstep. Myna has never stayed in one place for long after running from Mountain Springs. Although she and Linnet were close growing up, a family secret broke their bond, and Myna's return has brought back memories both sisters have tried to keep buried. When a

reporter arrives in town who may have a connection to the sisters' past, Linnet and Myna are forced to confront the event that tore them apart. But when a young professor who was assisting their father on the case turns up dead—and their father becomes the primary suspect—Linnet and Myna realize that their secret won't stay hidden for long...

The rise and fall of the ringtone industry and its effect on mobile entertainment, music, television, film, and politics. A decade ago, the customizable ringtone was ubiquitous. Almost any crowd of cell phone owners could produce a carillon of tinkly, beeping, synthy, musicalized ringer signals. Ringtones quickly became a multi-billion-dollar global industry and almost as quickly faded away. In *The Ringtone Dialectic*, Sumanth Gopinath charts the rise and fall of the ringtone economy and assesses its effect on cultural production. Gopinath describes the technical and economic structure of the ringtone industry, considering the transformation of ringtones from monophonic, single-line synthesizer files to polyphonic MIDI files to digital sound files and the concomitant change in the nature of capital and rent accumulation within the industry. He discusses sociocultural practices that seemed to wane as a result of these shifts, including ringtone labor, certain forms of musical notation and representation, and the creation of musical and artistic works quoting ringtones. Gopinath examines “declines,” “reversals,” and “revivals” of cultural forms associated with the ringtone and its changes,

including the Crazy Frog fad, the use of ringtones in political movements (as in the Philippine “Gloriagate” scandal), the ringtone's narrative function in film and television (including its striking use in the films of the Chinese director Jia Zhangke), and the ringtone's relation to pop music (including possible race and class aspects of ringtone consumption). Finally, Gopinath considers the attempt to rebrand ringtones as “mobile music” and the emergence of cloud computing.
