Poses the question, how can you energize people to see problems not as obstacles to success but as opportunities for innovation? Looks at what makes a lateral leader - the kind of person who can create a climate of creativity by inspiring people to have the confidence to take risks, and who can then develop their skills in creative techniques. Presents practical exercises for implementing the principles of lateral thinking and uses real-life examples to illustrate the rules, principles and processes involved.

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

The Presentation Secrets of Steve Jobs: How to Be Insanely Great in Front of Any Audience

Over two hundred and thirty years ago the Fallocaust happened, killing almost everything that lived and creating what is now known as the greywastes. A dead wasteland where cannibalism is a necessity, death your reality, and life before the radiation nothing but pictures in dog-eared magazines. Reaver is a greywaster, living in a small block controlled by a distant ruler said to have started the

Financial reporting practices differ widely between countries and this has far-reaching implications for multinational businesses. Over more than a century, there have been attempts to classify countries into groups by similarities of practices. With the recent spread of International Financial Reporting Standards, it might appear that classification is largely of historical interest, but this is not the case, for several reasons explained in this book. Christopher Nobes offers a critical analysis of the many previous accounting classifications, having drawn lessons from other fields of science and social science. Revised and updated to reflect the IFRS era, the book discusses how old classifications are reflected in today's

international differences in practice under IFRS. It concludes with a discussion on the most useful classifications, and how classifications can still be relevant in the era of international standards. This book will be essential for academics, postgraduates and undergraduates in international accounting, accounting theory and to international accounting professionals.

In this dynamic review and synthesis of empirical research and theoretical discussion of design as cognitive activity, Willemien Visser reconciles and integrates the classical view of design, as conceptualized by Herbert Simon's symbolic information processing approach, with modern views of design such as the situativity approach, as formulated by Donald Schön. The author goes on to develop her own view on design, in which design is most appropriately characterized as a construction of representations. The Cognitive Artifacts of Designing takes seriously the idea that design research warrants development in the cognitive sciences, and Visser lays the groundwork for the integration of design research and cognitive science. This seemingly simple framework -- designing is the construction of representations -- has implications that set the stage for this mutually beneficial integration. This volume will be of great interest to scholars concerned with design -- not only in cognitive design studies, but also in design methodology and engineering -- as well as cognitive scientists who are interested in problem solving in 'the real world.' Cognitive ergonomists and design practitioners will also be richly rewarded by a close reading of this volume.

Anke Hanft and Michaela Knust The present study examines and compares the structure and organisation of continuing higher education in six countries: Austria, Finland, France, Germany, the UK and the USA. The focus is not just on current continuing education provisions at higher education institutions but also on the institutions themselves and their surrounding milieu. The study also attempts to move away from a purely national angle and to approach the topic from an international perspective. The conclusion is reached that when it comes to the development, establishment and professional implementation of continuing education provisions, German higher education institutions lag behind the other countries in the comparison in almost all areas. The main findings in terms of the three levels ‘ system ’ , ‘ institution ’ , and ‘ programme ’ are summarised below.

### 1 Continuing Education in the Higher Education System

There are considerable divergences, both nationally and internationally, in the definition of the German term “ wissenschaftliche Weiterbildung ” ( “ academic continuing education ” ). In the English-speaking world, a variety of terms such as “ lifelong learning ” , “ adult education ” , “ continuing education ” , “ continuing higher education ” , “ university-level continuing education ” or “ continuing professional development ” are often used as synonyms without any precise differentiation – and this is not perceived as a problem.

This book describes the emerging point-of-care (POC) technologies that are paving the way to the next generation healthcare monitoring and management. It provides the readers with comprehensive, up-to-date information about the emerging technologies, such as smartphone-based mobile healthcare technologies, smart devices, commercial personalized POC technologies, paper-

based immunoassays (IAs), lab-on-a-chip (LOC)-based IAs, and multiplex IAs. The book also provides guided insights into the POC diabetes management software and smart applications, and the statistical determination of various bioanalytical parameters. Additionally, the authors discuss the future trends in POC technologies and personalized and integrated healthcare solutions for chronic diseases, such as diabetes, stress, obesity, and cardiovascular disorders. Each POC technology is described comprehensively and analyzed critically with its characteristic features, bioanalytical principles, applications, advantages, limitations, and future trends. This book would be a very useful resource and teaching aid for professionals working in the field of POC technologies, in vitro diagnostics (IVD), mobile healthcare, Big Data, smart technology, software, smart applications, biomedical engineering, biosensors, personalized healthcare, and other disciplines.

The Nordic financial crisis had it all: a botched liberalization, a huge boom followed by an even bigger bust, massive taxpayer-financed bailouts and, finally, deep long-run gains. The first-class team of scholars mobilized in this book convincingly tell a story that should be carefully studied by economists, bankers and policymakers. After this book, no one should be able to say: If we only knew ! Charles Wyplosz, Graduate Institute of International Studies, Geneva, Switzerland The financial crisis in Scandinavia in the early 1990s was a forerunner of the later world-wide crisis in 2007/8. Although the initial causation was different, the impact on their banks, though more localised, was just as severe. So we can benefit, and already policymakers have done so, from learning the lessons in this book on how to restore shattered banking systems to health. For this we owe a debt of gratitude to the editors, who have put together a series of key papers that emerged from a much larger exercise on the crisis that was earlier reported in four volumes in Swedish and Finnish. Amongst the many studies on current and past financial crises, this is a classic must-read . Charles A.E. Goodhart, London School of Economics, UK The Nordic

experience with financial crisis resolution could not be more timely. Everyone cites it as an example of how it should be done, but rarely does one find careful and detailed analysis. Now policymakers and others searching for guidance will know where to look. Barry Eichengreen, University of California, Berkeley, US Following World War II, Nordic countries were commonly regarded as successful and stable economies. This perception was, however, shattered in the early 1990s when Finland and Sweden encountered severe financial crises. Here, the authors explore the symptoms of financial crisis decreasing real income, soaring unemployment and exploding public deficits and their devastating effects. The book compares and contrasts the experiences of Finland and Sweden, then adopts an international perspective, encompassing the experiences of Asia, Latin America, Denmark and Norway. Lessons from the 1990s crisis are drawn, and possible solutions prescribed. The conclusion is that long-term effects of financial crises financial liberalization and integration are not as dramatic as the short-term effects, but may prove to be of greater importance over time. Only the future will show whether these long-term benefits will balance or even outweigh the enormous short-term costs of the crises. Highly relevant to the current international financial crisis currently afflicting the world economy, this timely book will prove invaluable to economists and other social scientists with a general interest in financial crises, and to those with a more specific interest in the evolution and models of Scandinavian economies.

Nestled between the Rocky Mountains to the west and the High Plains to the east, Denver, Colorado, is nicknamed the Mile High City because its official elevation is exactly one mile above sea level. Over the past ten years, it has also been one of the country's fastest-growing metropolitan areas. In Denver's early days, its geographic proximity to the mineral-rich mountains attracted miners, and gold and silver booms and busts played a large role in its economic success. Today, its central location—between the west and east coasts and between major cities of the Midwest—makes it a key node for the distribution of goods and services as well as an optimal site for federal agencies and telecommunications companies. In *Metropolitan Denver*, Andrew R. Goetz and E. Eric Boschmann show how the city evolved from its origins as a mining town into a cosmopolitan metropolis. They chart the foundations of Denver's recent economic development—from mining and agriculture to energy, defense, and technology—and examine the challenges engendered by a postwar population explosion that led to increasing income inequality and rapid growth in the number of Latino residents. Highlighting the risks and rewards of regional collaboration in municipal governance, Goetz and Boschmann recount public works projects such as the construction of the Denver International Airport and explore the smart growth movement that shifted development from postwar low-density, automobile-based, suburban and exurban sprawl to higher-density, mixed use, transit-oriented urban centers. Because of its proximity to the mountains and generally sunny weather, Denver has a reputation as a very

active, outdoor-oriented city and a desirable place to live and work. Metropolitan Denver reveals the purposeful civic decisions made regarding tourism, downtown urban revitalization, and cultural-led economic development that make the city a destination.

The Leader's Guide to Lateral Thinking Skills Springer

What happens when people turn their everyday experience into data: an introduction to the essential ideas and key challenges of self-tracking. People keep track. In the eighteenth century, Benjamin Franklin kept charts of time spent and virtues lived up to. Today, people use technology to self-track: hours slept, steps taken, calories consumed, medications administered. Ninety million wearable sensors were shipped in 2014 to help us gather data about our lives. This book examines how people record, analyze, and reflect on this data, looking at the tools they use and the communities they become part of. Gina Neff and Dawn Nafus describe what happens when people turn their everyday experience—in particular, health and wellness-related experience—into data, and offer an introduction to the essential ideas and key challenges of using these technologies. They consider self-tracking as a social and cultural phenomenon, describing not only the use of data as a kind of mirror of the self but also how this enables people to connect to, and learn from, others. Neff and Nafus consider what's at stake: who wants our data and why; the practices of serious self-tracking enthusiasts; the design of commercial self-tracking technology; and how self-tracking can fill gaps in the healthcare system. Today, no one can lead an entirely untracked life. Neff and Nafus show us how to use data in a way that empowers and educates.

Well before Ajax and Microsoft's Windows Presentation Foundation hit the scene, Macromedia offered the first method for building web pages with the responsiveness and functionality of desktop programs with its Flash-based "Rich Internet Applications". Now, new owner Adobe is taking Flash and its powerful capabilities beyond the Web and making it a full-fledged development environment. Rather than focus on theory, the *ActionScript 3.0 Cookbook* concentrates on the practical application of ActionScript, with more than 300 solutions you can use to solve a wide range of common coding dilemmas. You'll find recipes that show you how to: Detect the user's Flash Player version or their operating system Build custom classes Format dates and currency types Work with strings Build user interface components Work with audio and video Make remote procedure calls using Flash Remoting and web services Load, send, and search XML data And much, much more ... Each code recipe presents the Problem, Solution, and Discussion of how you can use it in other ways or personalize it for your own needs, and why it works. You can quickly locate the recipe that most closely matches your situation and get the solution without reading the whole book to understand the underlying code. Solutions progress from short recipes for small problems to more complex scripts for thornier riddles, and the discussions offer a deeper analysis for resolving similar issues in the future, along with possible design choices and ramifications. You'll even learn how to link modular ActionScript pieces together to create rock-solid solutions for Flex 2 and Flash applications. When you're not sure how ActionScript 3.0 works or how to approach a specific programming dilemma, you can simply pick up the book, flip to the relevant recipe(s), and quickly find the solution you're looking for. Product sales, especially for new products, are influenced by many factors. These factors are both internal and external to the selling organization, and are both controllable and uncontrollable. Due to the enormous complexity of such factors, it is not surprising that product failure rates are relatively high. Indeed, new product failure rates have variously been reported as between 40 and 90 percent. Despite this multitude of factors, marketing researchers have not been deterred from developing and designing techniques to predict or explain the levels of new product sales over time. The proliferation of the internet, the necessity or developing a road map to plan the launch and exit times of various generations of a product, and the shortening of product life cycles are challenging firms to investigate market penetration, or innovation diffusion, models. These models not only provide information on new product sales over time but also provide insight on the speed with which a new product is being accepted by various buying groups, such as those identified as innovators, early adopters, early majority, late majority, and laggards. New Product Diffusion Models aims to distill, synthesize, and integrate the best thinking that is currently available on the theory and practice of new product diffusion models. This state-of-the-art assessment includes contributions by individuals who have been at the forefront of developing and applying these models in industry. The book's twelve chapters are written by a combined total of thirty-two experts who together represent twenty-five different universities and other organizations in

Australia, Europe, Hong Kong, Israel, and the United States. The book will be useful for researchers and students in marketing and technological forecasting, as well as those in other allied disciplines who study relevant aspects of innovation diffusion. Practitioners in high-tech and consumer durable industries should also gain new insights from New Product Diffusion Models. The book is divided into five parts: I. Overview; II. Strategic, Global, and Digital Environments for Diffusion Analysis; III. Diffusion Models; IV. Estimation and V. Applications and Software. The final section includes a PC-based software program developed by Gary L. Lilien and Arvind Rangaswamy (1998) to implement the Bass diffusion model. A case on high-definition television is included to illustrate the various features of the software. A free, 15-day trial access period for the updated software can be downloaded from <http://www.mktgeng.com/diffusionbook>. Among the book's many highlights are chapters addressing the implications posed by the internet, globalization, and production policies upon diffusion of new products and technologies in the population.
