A thousand years ago, mankind thought the greatest thing technology would ever achieve would be crafting a stronger sword or a larger building. Flying? Mind reading? Virtual universes? These things were reserved for Gods and Heavens. But now, with the 'singularity' only twenty years away, it has become clear that technology has no limits. And with science fiction becoming science fact and the miraculous becoming the mundane, perhaps the time has come to apply a new, scientific interpretation to

events that we have always thought of as 'supernatural'. Even the possibility of our afterlife itself. Which is why this book dares to ask the taboo question, "What if the light at the end of that tunnel... is a technologically advanced future?" 'Technological Resurrection: A Thought Experiment' explores these questions and more as it gives us all a glimpse into our wild, new future, with insight, humor, and a dash of hope. Written by Jonathan A. Jones, author of 'Gods of the Singularity' and 'Doomsday AI' Locative Media Macmillan This volume analyses many of the real development challenges confronting the African continent, presenting fresh and current objective examinations, narratives, interpretations and pathways to the continent's development. It interrogates and answers established, critical, current and pragmatic problems

confronting Africa today, and provides workable pathways out of the development problems, so that scholarship, policy and practice will be positively impacted. This volume adds great depth and extended breadth to the knowledge base on development of Africa. It provides excellent resources for academics, scholars, student, policy makers and all those interested in issues affecting Africa's development. *The Symbian OS Architecture Sourcebook* Graphic Communications Group Philosopher, entrepreneur, and former National Geographic and New York Times correspondent Zoltan Istvan presents his visionary novel, *The Transhumanist Wager*, as a seminal statement of our times. Scorned by

over 500 publishers and literary agents around the world, his philosophical thriller has been called "revolutionary" and "socially dangerous" by readers, scholars, and religious authorities. The novel debuts a challenging original philosophy, which rebuffs modern civilization by inviting the end of the human species—and declaring the onset of something greater. Set in the present day, the novel tells the story of transhumanist Jethro Knights and his unwavering quest for immortality via science and technology. Fighting against him are fanatical religious groups, economically depressed governments, and mystic Zoe Bach: a dazzling trauma surgeon and the love of his life, whose belief in spirituality and the afterlife is absolute. Exiled from America and reeling from personal tragedy, Knights

forges a new nation of willing scientists on the world's largest seasteading project, Transhumania. When the world declares war against the floating city, demanding an end to its renegade and godless transhuman experiments and ambitions, Knights strikes back, leaving the planet forever changed.

Research in Attacks, Intrusions, and Defenses McGraw Hill Professional **BlackBerry Planet** is a new tribe of people who simply cannot get along without their favorite device, **Research in Motion's** innovative electronic organizer, the **BlackBerry**. This omnipresent device has gone beyond being the world's foremost mobile business tool and entered the consumer mainstream as the Swiss Army Knife of smart phones. **BlackBerry Planet** tells the behind-the-scenes story of how this little device has become the machine that connects

the planet. Starting with the early years of Mike Lazaridis' invention and his founding of RIM at age 23, it details his drive to innovate, developing what was a glorified pager into the essential corporate communicator, used by everyone from dealmakers to the Queen, from movie stars to the entire US Congress. Since 1992, Lazaridis and co-CEO Jim Balsillie together have been the driving force behind the RIM story. With access to senior staffers and former RIM employees, **BlackBerry Planet** tells the inside story about the branding and marketing success of the BlackBerry, from its use during 9/11, which earned RIM a reputation for security and reliability, to the cultural adoption of the iconic device as a must-have symbol, to the backlash against the addictive properties of the "CrackBerry," and the various patent suits RIM has had to fight off – including the five-year court battle that resulted in the largest

technology patent settlement in US history. As the incredible story of the BlackBerry unfolds, and as RIM battles global giants like Nokia and Apple in the emerging super-phone marketplace, users, fans, investors and competitors can look to BlackBerry Planet for the insight and context of where they 've been, to try and predict where they 're going.

The fifteen years from 2020 to 2035 could be the most turbulent of human history. Revolutions are gathering pace in four overlapping fields of technology: nanotech, biotech, infotech, and cognotech, or NBIC for short. In combination, these NBIC revolutions offer enormous new possibilities: enormous opportunities and enormous risks. Rapid technological change tends to provoke a turbulent social reaction. Old certainties fade. New winners arrive on the scene, flaunting their power, and upturning previous networks of relationships. Within the general public, a sense of alienation and disruption mingles with a sense of

profound possibility. Due to the increased scale, speed, and global nature of the ongoing NBIC revolutions, the disruptions that followed in the wake of previous industrial revolutions - seismic though they were - are likely to be dwarfed in comparison to what lies ahead. Amidst these turbulent waves, RAFT 2035 offers a Roadmap to Abundance, Flourishing, and Transcendence. RAFT issues a bold call to action, to encourage more people around the world to recognise the true scale of the opportunities ahead, to set aside distractions, and to build effective coalitions in pursuit of a set of 15 goals to be achieved by 2035. Written by the Chair of London Futurists, David Wood, RAFT shows that futurism isn't just about describing futures that are likely or possible. It's also about highlighting futures that are highly desirable, and seeking to change the arc of human history in the light of that insight. The 15 goals of RAFT range from significantly improved mental wellbeing, a radical new social contract, transformations in education and politics, a sustainable relationship with the

environment, reductions in the threat of violence and crime both locally and internationally, and a renewed focus on humanity's journey into new realms of both inner and outer space. For each goal, two interim targets for 2025 are identified, as important steps towards the radically better future that is within our grasp. "It's often said that technology is poised to make humans stronger and more intelligent. But RAFT emphasises the possibility of a change that is much more important - the potential for technology to make us kinder and more empathetic. It's a message that deserves to be widely heard." - David Pearce, Philosopher, and advocate of Paradise Engineering "In RAFT, David Wood challenges all of us to reconsider how technology can best serve ethics, safety, and values that uplift the human spirit. A future that champions the very best aspects of what it means to be human is within our grasp, if we can humanise technology, and harmonize the interests of advanced civilization with nature." - Nell Watson, Chair of EthicsNet.org and IEEE's Certification for Ethics in Transparency "The need for

a different set of politics is more pressing than ever. RAFT is a framework for the transition we need to make which is beyond the faultlines of traditional political positions."- Hannes Sjöblad, Co-founder DSruptive Sweden, and Chief Disruptive Officer of Epicenter Stockholm "I've often enjoyed listening to David Wood set out his hopes and fears for the future. In RAFT 2035 he applies his formidable insight to the very important question of securing a truly great future, for the United Kingdom and beyond, by 2035."- Matt O'Neill, Futurist Keynote Speaker, Futurist.Matt "RAFT 2035 maps out the possibilities and the trade-offs our exponential world is going to need. Continuing as before with tiny incremental steps is no longer an option: we need a RAFT of big ideas to make a step-change. Let's pick up these ideas and get on board for a brave new 2035." Paul Imre, VP of Education, Data Science Speakers Club, Toastmasters International

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its

toolkit at component level and providing a reference entry for each component.

Following the success of the First MOBILIGHT 2009 in Athens, Greece, the Second International Conference on Mobile Lightweight Systems (MOBILIGHT) was held in Barcelona, Spain on May 10-12, 2010. It was not an easy decision to carry on organizing a scientific event on wireless communications, where competition is really enormous. This decision was motivated by discussion with many colleagues

about the current unprecedented demand for lightweight, wireless communication devices with high usability and performance able to support added-value services in a highly mobile environment. Such devices follow the users everywhere they go (at work, at home, while travelling, in a classroom, etc.) and result in exciting research, development and business opportunities. Such scenarios clearly demand significant upgrades to the existing communication paradigm in terms of infrastructure, devices and services to support the “ anytime, anywhere, any device ” philosophy, providing novel and fast-evolving requirements and expectations on - search and development in the field of information and communication technologies. The core issue is to support wireless users' desire for 24/7 network availability and transparent access to "their own" services. In this context, we continue to envision an international forum where practitioners and researchers coming from the many areas involved in lightweight wireless systems ' design and deployment would be able to interact and exchange experiences.

Kingdom of Nokia tells a fascinating story of corporatism in Finland. How did the mobile phone giant Nokia make the Finnish elite willing to serve the interests of the company? Nokia became a global player in mobile communications in

the 1990s, and helped establish Anglo-Saxon capitalism in Finland. Through its success and strong lobbying, the company managed to capture the attention of Finnish politicians, civil servants, and journalists nationwide. With concrete detailed examples, Kingdom of Nokia illustrates how Nokia organised lavishing trips to journalists and paid direct campaign funding to politicians to establish its role at the core of Finnish decision-making. As a result, the company influenced important political decisions such as joining the European Union and adopting the euro, and further, Nokia even drafted its own law to serve its special interests. All this in a country considered one of the least corrupt in the world. H+/- Springer Science & Business Media

When Obama stated that if elected, he would keep his Blackberry, debate echoed through Washington and among the ranks of the Secret Service. What would it be like to have a president who could Twitter, send text messages, and navigate the web with ease? What would it be like to receive a text message from inside the Oval Office and, most importantly, what would it say? Now, for the first time, We The People are privy to our new leader's epistolary back-and-forths on his wily hand-held device. We're about to discover that his emails (and the replies, from his wife and daughters,

Biden, Palen, Rush, Hannity, the new first puppy, and even Bush) are so tuned in to the language of electronic correspondence they come hilariously close to the brink of legibility. This giftable, imagined glimpse into Obama's beloved Blackberry traverses the mundane and momentous contours of the Commander in Chief's life, from security briefings to spam, basketball practice to domestic bliss, and the panic of oops-I-hit-reply-all, to, of course, the trauma of dealing with the First Mother In Law.
