decorator to make their dream house a reality. They work with these people to sketch out plans for the structure of the house; determine what materials to use in building the house; and which decorations to use how to make the house warm and cozy. Accomplishing their goal and making sure they get exactly what they are paying for is in part due to everyone working off of the same set of blueprints and plan while they are exercising their unique talents and skills in getting the house completed. With the same care and even more, couples should invest in building their marital houses. Making sure they are working from the same plan, laying a solid foundation in the process and doing the work needed to keep their house intact and standing strong. In *Renovating Your Marriage*, Dr. Johnny Parker speaks to you and your spouse about building a house of togetherness brick by brick from the foundation up. He encourages you to consider the two possible foundations upon which marriages are built; then walks you through an inspection of

your marital house, room by room. Is your marital house standing on a firm foundation or has it been shaken? Are you in need of a marriage renovation? Dr. Parker wants to help you answer these questions and make the changes necessary to give your love a new look.

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to

---

interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference

section itemising the OS and its toolkit at component level and providing a reference entry for each component.

There has never been a book quite like Facing the Ultimate Fear. For that reason alone, it has value. The book is a practical manual exploding with many ways to calm fears, create love in any situation, and rise above challenges which frighten us into thinking that we are trapped. These ways are integrated within a storyline. The book's clear non-technical language (it reads like an entertaining novel) makes it appropriate for beginners. In addition, its wide range of wisdom as well as depth of content will appeal to readers who are interested in human potential, human behavior, and motivation. Kathleen Lowndes is an ordinary human being who is having an extraordinary chapter in her life. The book begins with her

---

experiences while working as a day class teacher, from the standpoint of what she learns personally. Those lessons assist her on the next part of her life journey, a medical adventure of remarkable proportion. This event provides the framework for the major section of the book. It includes her detailed preparations for one of the most dangerous surgeries known, and how she relearns basic functions after her surgery (walk, talk, think). As the intense feelings of hope which kick-start her recovery fade, she finds herself just like everyone else who is facing an impossible task. With lots of help, she implements methods which catapult her healing to an astonishingly effective level, and on three occasions gets completely better overnight, only to find that it does not last. Is there a way to make getting better 'stick?' Obviously so; she wrote the book. Even though most readers initially assume that the ultimate fear is the fear of death, there was an even greater fear for the author. However, it was while working her way through the fear of death that she was able to identify and then use the ultimate fear to her recovery benefit. The final chapter brings together her unusual experiences with fear as she draws multi-disciplinary conclusions about fear in general, the ultimate fear in particular, and where hopeful thinking now stands on the issue of extraordinary recoveries of any kind. Many books of recent years shout out that remarkable recoveries are possible. This book continues in that tradition but is unique in that the necessary principles are applied in steps to an actual, documented life-death situation. And all of that, while you feel like you are right there looking over the author's shoulder as she implements the principles which energize those steps. This book is a compelling read for those wanting to grab on to the edge of their seats. It is a comforting read for those plagued by mishaps and misunderstandings. It is an uplifting read for those wanting to make a difference. For those wishing to learn anything new, it is an empowering read. And for anyone seeking

---

genuine self-confidence, it is an imperative read. Facing the Ultimate Fear shows how a medical adventure transforms into an inspirational adventure and the door to life is opened. A new future comes into view.

Andrei Ershov, who was responsible for forming the department, gathered a team of young graduates from leading Soviet universities. The first significant project of the department was aimed at the development of ALPHA system, an optimizing compiler for an extension of Algol 60 implemented on a Soviet computer M-20. Later, the researchers of the department created the Algol-B, Epsilon, Sigma, and Alpha-6 programming systems for the BESM-6 computers. The list of their achievements also includes the first Soviet time-sharing system AIST-0, the multi-language system BETA, research projects in artificial intelligence and parallel programming, integrated tools for text processing and publishing, and many others.
