Nonviolent Crisis Intervention

DIANE Publishing

In 2003 the Bush Administration's New Freedom Commission asked mental health service providers to begin promoting "recovery" rather than churning out long-term, "chronic" mental health service users. Recovery's Edge sends us to urban America to view the inner workings of a mental health clinic run, in part, by people who are themselves "in recovery" from mental illness. In this provocative narrative, Neely Myers sweeps us up in her own journey through three years of ethnographic research at this unusual site, providing a nuanced account of different approaches to mental health care. Recovery's Edge critically examines the high bar we set for people in recovery through intimate stories of people struggling to find meaningful work, satisfying relationships, and independent living. This book is a recipient of the Norman L. and Roselea J. Goldberg Prize from Vanderbilt University Press for

the best book in the area of medicine.

As educational standards continue to transform, it has become essential for educators and pre-service teachers to receive the support and training necessary to effectively instruct their students and meet societal expectations. However, there is not a clear consensus on what constitutes teacher effectiveness and quality within the education realm. The Handbook of Research on Professional Development for Quality Teaching and Learning provides theoretical perspectives and empirical research on educator preparation and methods for enhancing the teaching process. Focusing on teacher effectiveness and support provided to current and pre-service educators, this publication is a comprehensive reference source for practitioners, researchers, policy makers, graduate students, and university faculty.

The SAFER-R Model Charles C Thomas Publisher

Psychological Crisis Intervention: The SAFER-R Model is designed to provide the reader with a simple set of guidelines for the provision of psychological first aid (PFA). The model of psychological first aid (PFA) for individuals presented in this volume is the SAFER-R model developed by the authors. Arguably it is the most widely used tactical model of crisis intervention in the world with roughly 1 million individuals trained in its operational and derivative guidelines. This model of PFA is not a therapy model nor a substitute for therapy. Rather it is designed to help crisis interventionists stabilize and mitigate acute crisis reactions in individuals, as opposed to groups. Guidelines for triage and referrals are also provided. Before plunging into the step-by-step guidelines, a brief history and terminological framework is provided. Lastly, recommendations for addressing specific psychological challenges (suicidal ideation, resistance to seeking professional psychological support, and depression) are provided.
