Minimalism is an action- and task-oriented approach to instruction and documentation that emphasizes the importance of realistic activities and experiences for effective learning and information seeking. Since 1990, when the approach was defined in John Carroll's *The Nurnberg Funnel*, much work has been done to apply, refine, and broaden the minimalist approach to technical communication. This volume presents fourteen major contributions to the current theory and practice of minimalism. Contributors evaluate the development of minimalism up to now, analyze the acceptance of minimalism by the mainstream technical communications community, report on specific innovations and

investigations, and discuss future challenges and directions. The book also includes an appendix containing a bibliography of published research and development work on minimalism since 1990. Contributors: Tricia Anson, R. John Brockmann, John M. Carroll, Steve Draper, David K. Farkas, JoAnn T. Hackos, Robert R. Johnson, Greg Kearsley, Barbara Mirel, Janice (Ginny) Redish, Stephanie Rosenbaum, Karl L. Smart, Hans van der Meij. Published in association with the Society for Technical Communication .

**\*\*WINNER OF THE 2020 NOBEL PRIZE IN PHYSICS\*\*** The Road to Reality is the most important and ambitious work of science for a generation. It provides nothing less than a comprehensive account of the physical universe and the essentials of its underlying mathematical theory. It assumes

no particular specialist knowledge on the part of the reader, so that, for example, the early chapters give us the vital mathematical background to the physical theories explored later in the book. Roger Penrose's purpose is to describe as clearly as possible our present understanding of the universe and to convey a feeling for its deep beauty and philosophical implications, as well as its intricate logical interconnections. The Road to Reality is rarely less than challenging, but the book is leavened by vivid descriptive passages, as well as hundreds of hand-drawn diagrams. In a single work of colossal scope one of the world's greatest scientists has given us a complete and unrivalled guide to the glories of the universe that we all inhabit. 'Roger Penrose is the most important physicist to work in relativity theory except for Einstein. He is one of the very few people I've met in my life who, without reservation, I call a genius' Lee Smolin

Data Mining: Concepts and Techniques provides the concepts and techniques in processing gathered data or information, which will be used in various applications. Specifically, it explains data mining and the tools used in discovering knowledge from the collected data. This book is referred as the knowledge discovery from data (KDD). It focuses on the feasibility, usefulness, effectiveness, and scalability of techniques of large data sets. After describing data mining, this edition explains the methods of knowing, preprocessing, processing, and warehousing data. It then presents information about data warehouses, online analytical processing (OLAP), and data cube technology. Then, the methods involved in mining frequent patterns, associations, and correlations for large data sets are described. The book details the methods for data classification and introduces the concepts and

methods for data clustering. The remaining chapters discuss the outlier detection and the trends, applications, and research frontiers in data mining. This book is intended for Computer Science students, application developers, business professionals, and researchers who seek information on data mining. Presents dozens of algorithms and implementation examples, all in pseudo-code and suitable for use in real-world, large-scale data mining projects

Millennium Book One: The Fall Of Terok Nor LexisNexis

Take One's Essential Guide to Canadian Film is the most exhaustive and up-to-date reference book on Canadian film and filmmakers, combining 700 reviews and biographical listings with a detailed chronology of major events in

Canadian film and television history. Compiled by Wyndham Wise, the editor and publisher of Take One, Canada's most respected film magazine, with a foreword by Canadian director Patricia Rozema, this is the only reference book of its kind published in English. Each film title is listed with credits, a mini review, and significant awards. Biographical listings of directors, producers, actors, writers, animators, cinematographers, distributors, exhibitors, and independent filmmakers are accompanied by date and place of birth, date of death if applicable, a brief career overview, and a filmography. Wise celebrates Canadian achievement on both a national and an international scale, and juxtaposes the distinctly Canadian with Canada's exports to Hollywood: Maury Chaykin and Jim Carrey, John Candy and William Shatner, Mon Oncle Antoine and Porky's, Highway 61 and Meatballs, The Red Violin and The Art of War. From great early Hollywood stars like Walter Huston, Fay Wray, Mary Pickford, Norma Shearer, and Marie Dressler, to our current crop of star directors - including Patricia Rozema, Atom Egoyan, David Cronenberg, Denys Arcand, Peter Mettler, Guy Maddin, and Robert Lepage - Canadians have made an important but largely unrecorded contribution to the history of world cinema. Impressive for its breadth of coverage, refreshing in its opinionated informality, this comprehensive and lively look at Canadian film culture at the start of the twenty-first century admirably fills the gap.
