[The Crime Scene: A Visual Guide](#) provides visual instruction on the correct way to process a crime scene. While the primary crime scene comprises the area from which most of the physical evidence is retrieved by crime scene investigators (CSIs), forensic scientists, or law enforcement personnel, this book also covers secondary and

often tertiary crime scenes, all locations where there is the potential for the recovery of evidence. By using photographs and other diagrams to show proper and improper procedures, the reader will learn how to identify the correct principles required to process a scene. The book presents chapters on the investigation, the varying types of documentation, and the tactics used to connect events through crime scene reconstruction using evidence The book's authors have a combined experience of over 70 years in crime scene investigation as primary responders and consultants giving testimony in all levels of the U.S. court system. In addition, both teach forensic science and crime scene investigation at the university level. Coverage of techniques, documentation and reconstruction at a crime scene Shows side-by-side comparison of the correct process versus the incorrect process Online website will host: videos and additional instructional material

An in-depth look at the role of plant spirits in shamanic rituals from around the world • Shows how shamans heal using their knowledge of plant spirits as well as the plant ' s " medical properties " • Explores the core methods of plant shamanism--soul retrieval, spirit extraction, and sin eating--and includes techniques for connecting with plant spirits • Includes extensive field interviews with master shamans of all traditions In [Plant Spirit Shamanism](#), Ross Heaven and Howard G. Charing explore the use of one of the major allies of shamans for healing, seeing, dreaming, and empowerment--plant spirits. After observing great similarities in the use of plants among shamans throughout

the world, they discovered the reason behind these similarities: Rather than dealing with the " medical properties " of the plants or specific healing techniques, shamans commune with the spirits of the plants themselves. From their years of in-depth shamanic work in the Amazon, Haiti, and Europe, including extensive field interviews with master shamans, Heaven and Charing present the core methods of plant shamanism used in healing rituals the world over: soul retrieval, spirit extraction, sin eating, and the Amazonian tradition of pusanga (love medicine). They explain the techniques shamans use to establish connections to plant spirits and provide practical exercises as well as a directory of traditional Amazonian and Caribbean healing plants and their common North American equivalents so readers can explore the world of plant spirits and make allies of their own. Four titles from the best-selling Wonders of Creation Series are combined for a full year of study. The focus of the course delves into oceans, astronomy, weather, and mineral, all helping the student form a solid, biblical worldview. Combined with the teacher guide, you will have a detailed calendar for each week of study, reproducible worksheets, quizzes and tests, and answers keys to help grade all assignments. [General Science I Course Description](#) This is the suggested course sequence that allows two core areas of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials within each semester are independent of one another to allow flexibility. Quarter 1: Ocean The oceans may well be Earth ' s final frontier. These dark and sometimes mysterious waters cover 71 percent of the surface area of the globe and have yet to be fully

explored. Under the waves, a watery world of frail splendor, foreboding creatures, vast mountains, and sights beyond imagination awaits. Now this powerful resource has been developed for three educational levels! Learning about the oceans and their hidden worlds can be exciting and rewarding — the abundance and diversity of life, the wealth of resources, the latest discoveries, and the simple mysteries that have intrigued explorers and scientists for centuries. A better understanding of our oceans ensures careful stewardship of their grandeur and beauty for future generations, and leads to a deeper respect for the delicate balance of life on that God created on planet Earth. Quarter 2: Astronomy The universe is an amazing declaration of the glory and power of God! Beautiful and breathtaking in its scale, the vast expanse of the universe is one that we struggle to study, understand, or even comprehend in terms of its purpose and size. Now take an incredible look at the mysteries and marvels of space in The New Astronomy Book! If you watch the stars at night, you will see how they change. This speaks to the enormity and intricacy of design in the universe. While the stars appear timeless, they instead reflect an all-powerful Creator who speaks of them in the Bible. Many ancient pagan cultures taught that the changing stars caused the seasons to change, but unlike these pagan teachings, the Book of Job gives credit to God for both changing stars and seasons (Job 38:31-33). When Job looked at Orion, he saw about what we see today, even though he may have lived as much as 4,000 years ago. Quarter 3: Weather From the practical to the pretty amazing, this book gives essential details into understanding what weather is, how it works, and how other forces that impact on it. Learn why storm chasers and hurricane hunters do what they do and how they are helping to solve storm connected mysteries. Discover what makes winter storms both beautiful and deadly, as well as what is behind weather phenomena like St. Elmo's Fire. Find important information on climate history and answers to the modern questions of supposed climate change. Get safety tips for preventing dangerous weather related injuries like those from lightning strikes, uncover why thunderstorms form, as well as what we know about the mechanics of a tornado and other extreme weather examples like flash floods, hurricanes and more. A fresh

and compelling look at wild and awesome examples of weather in this revised and updated book in the Wonders of Creation series! Quarter 4: Mineral Minerals are a gift of God's grace. Every day we touch them, seeing the diamond in an engagement ring or a copper chain with a cross on it. Minerals are touched on in video games like Minecraft® and Mineral Valley™, making them more a part of our daily experience. Salt, one vital mineral, helps maintain the fluid in our blood cells and is used to transmit information in our nerves and muscles. Also, Jesus told his followers that we are the salt of the earth (Matthew 5:13), something thus needed for health and flavor. Here is a God-honoring book that reveals the first mention of minerals in the Bible, symbolic usages, their current values in culture and society, and their mention in heaven.

Poor student performance on summative assessments has been a common problem throughout my teaching career. This has caused me to consider alternative methods of delivering new material to my students. The purpose of this study was to investigate the effects of online learning vs. lecture on student understanding. During unit one of my treatment I delivered notes entirely by lecturing. Following each lecture, my students completed guided note questions within small groups. We discussed their answers as a class and the students then took an individual note quiz over the new material. The second unit was studied by online learning in which students logged on to our class website, read the notes individually, and answered guided note questions within small groups. We discussed their answers as a class and students

completed an individual note quiz as we had done following a period of lecture. For the remainder of my treatment, I allowed my students to choose which method of note-taking they preferred and divided my students into two groups according to their responses. Students followed the same procedure as they had during the first two units. Through the analysis of data collected I was able to determine that male students learned better following units of online learning while female students learned better through lecture. I also learned that the lower level students experienced the greatest impact when changing between lecture and online learning. Despite the success many male students had with online learning, analysis of student survey data and interview responses showed that the majority of students preferred lecture to online learning and felt better prepared and more confident following units in which that strategy was implemented. Observations and journal entries suggest that I experienced fewer behavioral problems and a greater percentage of students asking and correctly answering questions following periods in which a mixture of lecture and online learning were implemented. As a result, I have concluded that combining both strategies and allowing students to choose their preferred method of note-taking will continue to have a positive effect on both my students and my future teaching.
