According to the physical meaning of temperature, the temperature of a gas is determined by the chaotic movement of its particles – the colder the gas, the slower the particles. At zero kelvin...

*Nothing From Absolute Zero To*

Absolute zero is the lowest limit of the thermodynamic temperature scale, a state at which the enthalpy and entropy of a cooled ideal gas reach their minimum value, taken as zero kelvins. The fundamental particles of nature have minimum vibrational motion, retaining only quantum mechanical, zero-point energy-induced particle motion. The theoretical temperature is determined by extrapolating the ...

Absolute zero, temperature at which a thermodynamic system has the lowest energy. It corresponds to minus 273.15 degrees Celsius and to minus 459.67 degrees Fahrenheit. While all molecular movement does not cease at absolute zero, no energy from that motion is available for transfer to other systems.

finite time, and we established a relation between time and the lowest possible temperature. It's the speed of cooling." What Masanes is referring to here are two fundamental assumptions that the third law of thermodynamics depends on for its validity.

Absolute zero corresponds to  $-273$  degrees Celsius and  $-460$  degrees Fahrenheit. Cooling an object requires extracting energy from it and depositing it somewhere else. In household refrigerators, for...
