The writers behind *New Scientist* explore the baffling concept of nothingness from the fringes of the universe to our minds' inner workings. It turns out that nothing is as curious or as enlightening as nothingness itself. What is nothing? Where can it be found? The writers of the world's top-selling science magazine investigate—from the big bang, dark energy, and the void, to superconductors, vestigial organs, hypnosis, and the placebo effect. And they discover that understanding nothing may be the key to understanding everything: What came before the big bang—and will our universe end? How might cooling matter down almost to absolute zero help solve our energy crisis? How can someone suffer from a false diagnosis as though it were true? Does nothingness even exist if squeezing a perfect vacuum somehow creates light? Why is it unfair to accuse sloths—animals who do nothing—of being lazy? And more! Contributors Paul Davies, Jo Marchant, and Ian Stewart, along with two former editors of *Nature* and sixteen other leading writers and scientists, marshal up-to-the-minute research to make one of the most perplexing realms in science dazzlingly clear. Prepare to be amazed at how much more there is to nothing than you ever realized.

The concept of nothing was an enduring concern of the 20th century. As Martin Heidegger and Jean-Paul Sartre each positioned nothing as inseparable from the human condition and essential to the creation or operation of human existence, as Jacques Derrida demonstrated how all structures are built upon a nothing within the structure, and as mathematicians argued that zero? the number that is also not a number? allows for the creation of our modern mathematical system, *Narratives of Nothing in 20th-Century Literature* suggests that nothing itself enables the act of narration. Focusing on the literary works of Vladimir Nabokov, Samuel Beckett, and Victor Pelevin, Meghan Vicks traces how and why these writers give narrative form to nothing, demonstrating that nothing is essential to the creation of narrative? that is, how our perceptions are conditioned, how we make meaning (or madness) out of the stuff of our existence, how we craft our knowable selves, and how we exist in language.

"You will not sleep until you are finished with AGENT ZERO. The author did a superb job creating a set of characters who are fully developed and very much enjoyable. Agent Zero (An Agent Zero Spy Thriller—Book #1) The Experiment

All too easily, we ignore or dismiss the fascinating possibilities of emptiness and non-existence. But without nothing, or rather what we've long taken to be nothing - we'd be nowhere. This title is suitable for those who are interested in science - or in the greatest mysteries of our world.

Bestselling author and acclaimed physicist Lawrence Krauss offers a paradigm-shifting view of how everything that exists came to be in the first place. "Where did the universe come from? What was there before it? What will the future bring? And finally, why is there something rather than nothing?" One of the few prominent scientists today to have crossed the chasm between science and popular culture, Krauss describes the staggeringly beautiful experimental observations and mind-bending new theories that demonstrate not only can something arise from nothing, something will always arise from nothing. With a new preface about the significance of the discovery of the Higgs particle, *A Universe from Nothing* uses Krauss's characteristic wry humor and wonderfully clear explanations to take us back to the beginning of the beginning, presenting the most recent evidence for how our universe evolved—and the implications for how it's going to end. Provocative, challenging, and delightfully readable, this is a game-changing look at the most basic underpinning of existence and a powerful antidote to outmoded philosophical, religious, and scientific thinking.

It's Silence, Soundly, It's Nothing, Seriously and It's Absence, Presently, continue The 'It' Series published by Matador since *The Book of It* (2010). They constitute another stage in an artistic journey exploring the visual and audial dialectic of mark, word and image that began over 25 years ago. In their aesthetic form the books are a decentred trilogy united together in a new concept of *The Bibliograph*. All three present this new aesthetic object, which transcends the narrow limits of the academic bibliography. The alphabetical works also share a tripartite structure and identical length. The *Bibliograph* itself is characterised by its strategic place within each book as a whole as well as by the complex variations in meaning of the dominant motifs – nothing/ness, absence and silence – which recur throughout the alphabetical entries that constitute the elements of each text. *It's Nothing, Seriously*, for example, addresses the amusing paradox that so much continues to be written today about – nothing! The aleatory character of the entries in the texts encourage the modern reader to reflect on each theme and to read them in a new way. The reader is invited as well to examine their various inter-textual relations across given conventional boundaries in the arts and sciences at several levels of physical, psychical & social reproduction.

Absolute Zero (An Agent Zero Spy Thriller—Book #12) Troubador Publishing Ltd

Every age needs to examine and propose its ways of living ethically. Another Kind of Normal: Ethical Life II constructs a mode of such living according to the Christian tradition, based upon an interpretation of Christ's coming and the relationship of that incarnation to God as the Creator of all things. In the second of four volumes, Graham Ward explores an Augustinian vision of consonance between divine rhythm and the rhythmic orders of creation. On the basis of what Augustine calls the 'interval', it proposes Christ is encountered as riddle, scandal, and paradox. It provides an account of creation as a Trinitarian event that calls for a rethinking of what are the key teachings in Christianity with respect to an understanding of creation as a divine benediction and a theatre for transformation and healing. Ward argues through Scriptural exegesis, for the omnidirectionality of

time as graced, rejecting a conception of linear temporality and theologies indebted to that conception. Throughout, participation in God, through our hiddenness in Christ develops an account of the complex relationship between divine and human creativity, appealing to music, painting, poetry, drama, film, architecture, and novels.

In an era of digital revolution, artificial intelligence, big data and augmented reality, technology has shifted from being a tool of communication to a primary medium of experience and sociality. Some of the most basic human capacities are increasingly being outsourced to machines and we increasingly experience and interpret the world through digital interfaces, with machines becoming ever more 'social' beings. Social interaction and human perception are being reshaped in unprecedented ways. This book explores this technologisation of the social and the attendant penetration of permanent liminality into those aspects of the lifeworld where individuals had previously sought some kind of stability and meaning. Through a historical and anthropological examination of this phenomenon, it problematises the underlying logic of limitless technological expansion and our increasing inability to imagine either ourselves or our world in other than technological terms. Drawing on a variety of concepts from political anthropology, including liminality, the trickster, imitation, schismogenesis, participation, and the void, it interrogates the contemporary technological revolution in a manner that will be of interest to sociologists, social and anthropological theorists and scholars of science and technology studies with interests in the digital transformation of social life.

Back when God was the only thing that existed, it was dark and cold everywhere. There was nothing but space, and it had been that way forever. There was no light, because there was nothing to make light with. There was no heat, because there was nothing to make

heat with. There was no sound, because sound cannot travel in a vacuum, and that is all there was, one big vacuum. Besides, sound has to be made, and there was nothing to make sound with.

The value of nothing is explored in rich detail as the author reaches back as far as the ancient Sumerians to find evidence that humans have long struggled with the concept of zero, from the Greeks who may or may not have known of it, to the East where it was first used, to the modern-day desktop PC, which uses it as an essential letter in its computational alphabet.

Nothing: A Very Short Introduction Springer

The book is a first person account of a soldier's journey, and is based on Artem Chekh's diary that he wrote while and after his service in the war in Donbas. One of the most important messages the book conveys is that war means pain. Chekh is not showing the reader any heroic combat, focusing instead on the quiet, mundane, and harsh soldier's life. Chekh masterfully selects the most poignant details of this kind of life.

"A lovely, fascinating book, which brings science to life." —Alan Lightman Combining science, history, and adventure, Tom Shachtman "holds the reader's attention with the skill of a novelist" as he chronicles the story of humans' four-centuries-long quest to master the secrets of cold (Scientific American). "A disarming portrait of an exquisite, ferocious, world-ending extreme," Absolute Zero and the Conquest of Cold demonstrates how temperature science produced astonishing scientific insights and applications that have revolutionized civilization (Kirkus Reviews). It also illustrates how scientific advancement, fueled by fortuitous discoveries and the efforts of determined individuals, has allowed people to adapt to—and change—the environments in which they live and work, shaping man's very understanding of, and relationship, with the world. This "truly wonderful book" was adapted into an acclaimed documentary underwritten by the National Science Foundation and the Alfred P. Sloan Foundation, directed by British Emmy Award winner David Dugan, and aired on the BBC and PBS's Nova in 2008 (Library Journal). "An absorbing account to chill out with." —Booklist
