Absolute zero, temperature at which a thermodynamic system has the lowest energy. It corresponds to minus 273.15 degrees Celsius and to minus 459.67 degrees Fahrenheit. While all molecular movement does not cease at absolute zero, no energy from that motion is available for transfer to other systems.

When people asked me what I was reading, I really enjoyed saying I've been reading 'Nothing' ! Brilliant book and a great little read.

Encompasses all sorts of 'nothings' from the power of the placebo effect, the Big Bang, the power of the mind in healing, black holes, vacuums, absolute zero, lazy animals and what the brain is really doing when it's doing 'Nothing'.

The fundamental particles of nature have minimum vibrational motion, retaining only quantum mechanical, zero-point energy-induced particle motion. The theoretical temperature is determined by extrapolating the ... After 100 Years of Debate, Hitting Absolute Zero Has Been ... But scientists have known for centuries that nothing is the key to understanding absolutely everything, from why particles have mass to the expansion of the universe - so without nothing we'd be precisely nowhere. Absolute zero (the coldest cold that can exist) and the astonishing power of placebos, light bulbs, superconductors, vacuums, dark energy, 'bed rest' and the birth of time - all are different aspects of the concept of nothing.

"We then conclude that it is impossible to cool a system to absolute zero in a finite time, and we established a relation between time and the lowest possible temperature. It's the speed of cooling." What Masanes is

referring to here are two fundamental assumptions that the third law of thermodynamics depends on for its validity.

Why is absolute zero (0 kelvin or -273.15°C) an impossible goal? Practically, the work needed to remove heat from a gas increases the colder you get, and an infinite amount of work would be ...

The subtitle is From Absolute Nothing to Cosmic Oblivion. It's a history of the number zero, how medieval Europe struggled with the existential crisis that such a number would create. It's about zero as a mathematical concept and a physical number, its importance to astronomy, to physics and to science in general.
