“You will not sleep until you are finished with AGENT ZERO. A superb job creating a set of characters who are fully developed and very much enjoyable. The description of the action scenes transport us into a reality that is almost like sitting in a movie theater with surround sound and 3D (it would make an incredible Hollywood movie). I can hardly wait for the sequel.” --Roberto Mattos, Books and Movie Reviews ABSOLUTE ZERO is book #12—and the series finale—in the #1 bestselling AGENT ZERO series, which begins with AGENT ZERO (Book #1), a free download with over 500 five-star reviews. In the shocking series finale, Agent Zero learns of a powerful thermonuclear bomb which, set off in the right place, could kill tens of

millions. In a breathtaking twist, he learns of something else that will make it even more deadly. The fate of the world is literally at stake as Agent Zero finds himself in a mad race against time, the only person on the planet with a capacity to find the weapon. Yet, while Zero races to find the location, he is up against other formidable forces: dozens of assassins are dispatched to kill him. And in the midst of all this, the time has come for Zero to have a final reckoning with his own deteriorating health. Full circle from his original discovery of the memory chip, Agent Zero is given one last chance to save the planet—if only he can keep from destroying himself—and everything in his path—in his wake. ABSOLUTE ZERO (Book #12) is an unputdownable espionage thriller that will keep you turning pages late into the night, and the satisfying and stunning climax to a masterful 12-book espionage action series. “Thriller writing at its best.” --Midwest Book Review (re Any Means Necessary) “One of the best thrillers I have read this year.” --Books and Movie Reviews (re Any Means Necessary) Also available is Jack Mars’ #1 bestselling LUKE STONE THRILLER series (7 books), which begins with Any Means Necessary (Book #1), a free download with over 800 five star reviews! **Nothing** Oxford University Press, USA

" --Roberto Mattos, Books and Movie Reviews In this much-anticipated debut of an epic spy thriller series by #1 bestseller Jack Mars, readers are taken on an action thriller across Europe as presumed-CIA operative Kent Steele, hunted by terrorists, by the CIA, and by his own identity, must solve the mystery of who is after him, of the terrorists ' pending target—and of the beautiful woman he keeps seeing in his mind. Kent Steele, 38, a brilliant professor of European History at Columbia University, lives a quiet life in a New York suburb

with his two teenage daughters. All that changes when late one night he gets a knock on his door and is abducted by three terrorists—and finds himself flown across the ocean to be interrogated in a basement in Paris. They are convinced that Kent is the most lethal spy the CIA has ever known. He is convinced they have the wrong man. Do they? With a conspiracy around him, adversaries as smart as he is, and an assassin on his tail, the wild game of cat and mouse leads Kent on a perilous road—one that may lead back to Langley—and to a shocking discovery of his own identity. Nothing: A Very Short Introduction Routledge
Zero, zip, nada, zilch. It's all too easy to ignore the fascinating possibilities of emptiness and non-existence, and we may well wonder what there is to say about nothing. But scientists have known for centuries that nothing is the key to understanding absolutely everything, from why particles

have mass to the expansion of the universe; without nothing we'd be precisely nowhere. With chapters by 22 science writers, including top names such as Ian Stewart, Marcus Chown, Helen Pilcher, Nigel Henbest, Michael Brooks, Linda Geddes, Paul Davies, Jo Marchant and David Fisher, this fascinating and intriguing book revels in a subject that has tantalised the finest minds for centuries, and shows there's more to nothing than meets the eye.

When a recon becomes a rescue . . . nothing is absolute! Earth, a desolate wasteland is now run by the Corporations from space stations off planet . . . A colony of thirty-three people are part of compound set up on Neptune. Their objective is mining the planet surface for natural resources. When a distress signal reaches Euphoric Enterprises on the Nebula Way Station, the Eclipse is immediately dispatched to investigate. The crew of the Eclipse had no idea what they were getting themselves into. When they reach Neptune, and send out a shuttle party, they hope they can find the root cause behind the alarm. Nothing is ever simple. Something sinister lies in wait for them on Neptune. The mission quickly goes from an investigation into a rescue operation. The young crew from the Eclipse now finds themselves in the fight of their lives!

The Illuminati Paradigm Shift The Experiment

What conceptual blind spot kept the ancient Greeks (unlike the Indians and Maya) from developing a concept of zero? Why did St. Augustine equate nothingness with the Devil? What tortuous means did 17th-century scientists employ in their attempts to create a vacuum? And why do contemporary quantum physicists believe that the void is actually seething with subatomic activity? You'll find the answers in this dizzyingly erudite and elegantly explained book by the English cosmologist John D. Barrow. Ranging through mathematics, theology, philosophy, literature, particle physics, and cosmology, *The Book of Nothing* explores the enduring hold that vacuity has exercised on the human imagination. Combining high-wire speculation with a wealth of reference that takes in Freddy Mercury and Shakespeare alongside Isaac Newton, Albert Einstein, and Stephen Hawking, the result is a fascinating excursion to the vanishing point of our knowledge.

The value of nothing is explored in rich detail as the author reaches back as far as the ancient Sumerians to find evidence that humans have long struggled with the concept of zero, from the Greeks who may or may not have known of it, to the East where it was first used, to the modern-day desktop PC, which uses it as an essential letter in its computational alphabet.

In 1922 Barnes Wallis FRS, who later invented the transatlantic airship and the bouncing bomb immortalized in the movie *The Dam Busters*, fell in love for the first and last time - aged 35. The object of his affection, Molly Bloxam, was 17 and setting off to study science at University College London. Her father decreed that the two could correspond only if Barnes taught Molly mathematics in his letters. *Mathematics with Love* presents, for the first time, the result of this curious diktat: a series of witty, tender and totally accessible introductions to calculus, trigonometry and electrostatic induction that remarkably, wooed and won the girl. Deftly narrated by Barnes and Molly's daughter Mary,

Mathematics with Love is an evocative tale of a twenties courtship, a surprising insight into the early life of an engineering genius - and a great way to learn a little mathematics.

The man is a sex dream I want to keep having... He, is the Beast of Chill. She, is the Ember that will burn him down. Leading Man: Zachariah Eminent (Zero) is dedicated to a life of taking it easy, he enjoys a drink or (ten) of White Russian, is a well-known stoner who enjoys surfing naked. He has a fatal lack of ambition, and while he doesn't care what other people think of him, the man has a heart of solid gold. Leading lady: Joanne Eagan (Jo) is an uptight, high-strung, judgemental overachiever working in promotion management. She's addicted to drama prone, highly driven, artistic men, and is on the verge of a break down after making the mistake of falling in love with her cheating man whore of a boss, Caden Black, the outrageous sex maniac lead singer of a famous rock band. What's the story? After his famous Father, leader of a wildly successful media empire dies, Zero is feeling like he's down to nothing. He's feeling like absolute zero with the weight of the world on his shoulders, and yet, his ambition long thought amputated at

birth is sparked when he meets the very intense Jo. He audaciously claims her as "his girl" the first time they meet, and takes her breath away for all the wrong reasons. Zero is a poor imitation of his more impressive motivational speaking powerhouse BOSS of a twin brother, Eamon Eminent, the man Jo should want; except after one hot hit of Zero's brand of dirty, sexy, thoughtful intimacy, she finds herself addicted. She can't get enough of him, this crazy, hot mess of a man has made her question everything she thought she always wanted ...

Much Ado about (Practically) Nothing Marvel

The writers behind *New Scientist* explore the baffling concept of nothingness from the fringes of the universe to our minds' inner workings. It turns out that nothing is as curious or as enlightening as nothingness itself. What is nothing? Where can it be found? The writers of the world's top-selling science magazine investigate—from the big bang, dark energy, and the void, to superconductors, vestigial organs, hypnosis, and the placebo effect. And they discover that understanding nothing may be the key to understanding everything: What came before the big bang—and will our universe end? How might cooling matter down almost to absolute zero help solve our energy crisis? How can someone suffer from a false diagnosis as though it were true? Does nothingness even exist if squeezing a perfect vacuum somehow creates light? Why is it unfair to accuse sloths—animals who do nothing—of being lazy? And more! Contributors Paul Davies, Jo

Marchant, and Ian Stewart, along with two former editors of *Nature* and sixteen other leading writers and scientists, marshal up-to-the-minute research to make one of the most perplexing realms in science dazzlingly clear. Prepare to be amazed at how much more there is to nothing than you ever realized.

It's Silence, Soundly, It's Nothing, Seriously and *It's Absence, Presently*, continue The 'It' Series published by Matador since *The Book of It* (2010). They constitute another stage in an artistic journey exploring the visual and audial dialectic of mark, word and image that began over 25 years ago. In their aesthetic form the books are a decentred trilogy united together in a new concept of The Bibliograph. All three present this new aesthetic object, which transcends the narrow limits of the academic bibliography. The alphabetical works also share a tripartite structure and identical length. The Bibliograph itself is characterised by its strategic place within each book as a whole as well as by the complex variations in meaning of the dominant motifs - nothing/ness, absence and silence - which recur throughout the alphabetical entries that constitute the elements of each text.

It's Nothing, Seriously, for example, addresses the amusing paradox that so much continues to be written today about - nothing! The aleatory character of the entries in the texts encourage the modern reader to reflect on each theme and to read them in a new way. The reader is invited as well to examine their various inter-textual relations across given conventional boundaries in the arts and sciences at several levels of physical, psychical & social reproduction.

Richard Dawkins is arguably the modern poster boy for Charles Darwin. However, a key difference radically separates the two men. Darwin believed in the existence of God and calls God the "Creator" seven times in "The Origin of Species." Dawkins, in contrast, claims, "The more you understand the significance of evolution, the more you are pushed...towards atheism." It seems Professor

Dawkins thinks Charles Darwin didn't understand his own theory. Just months after the 2009 discovery of the supposed "missing link," author Ray Comfort turns the tables on evolutionists. In "Nothing Created Everything," he examines the evidence for evolution and shows it is lacking. He demonstrates that when it comes to explaining how life began, atheists and evolutionists offer faith not facts. Ironically, atheists insist nothing created everything, a scientific impossibility. In a conversational tone, Comfort speaks to both atheists and believers and urges this discussion be based on hard evidence. And when it is, he insists, people will realize evolution is a theory that can't be tested or measured and therefore can't be scientific.

Nothing Oxford University Press Nothing really matters. All the things that we do not do, have or become in our lives can be important in shaping self-identity. From jobs turned down to great loves lost, secrets kept and truths untold, people

missed and souls unborn, we understand ourselves through other, un-lived lives that are imaginatively possible. This book explores the realm of negative social phenomena - no-things, no-bodies, non-events and no-where places - that lies behind the mirror of experience. Taking a symbolic interactionist perspective, the author argues that these objects are socially produced, emerging from and negotiated through our relationships with others. Nothing is interactively accomplished in two ways, through social acts of commission and omission. Existentialism and phenomenology encourage us to understand more deeply the subjective experience of nothing; this can be pursued through conscious meaning-making and reflexive self-awareness. *The Social Life of Nothing* is a thought-provoking book that will appeal to scholars across the social sciences, arts and humanities, but its message also resonates with the interested general reader.

When God Went from Absolute Zero to 98.6 OUP USA

In an era of digital revolution, artificial intelligence, big data and augmented reality, technology has shifted from being a tool of communication to a primary medium of experience and sociality. Some of the most basic human capacities

are increasingly being outsourced to machines and we increasingly experience and interpret the world through digital interfaces, with machines becoming ever more 'social' beings. Social interaction and human perception are being reshaped in unprecedented ways. This book explores this technologisation of the social and the attendant penetration of permanent liminality into those aspects of the lifeworld where individuals had previously sought some kind of stability and meaning. Through a historical and anthropological examination of this phenomenon, it problematises the underlying logic of limitless technological expansion and our increasing inability to imagine either ourselves or our world in other than technological terms. Drawing on a variety of concepts from political anthropology, including liminality, the trickster, imitation, schismogenesis, participation, and the void, it interrogates the contemporary technological revolution in a manner that will be of interest to sociologists, social and anthropological theorists and scholars of science and technology studies with interests in the digital transformation of social life.

soldier's journey, and is based on Artem Chekh's diary that he wrote while and after his service in the war in Donbas. One of the most important messages the book conveys is that war means pain. Chekh is not showing the reader any heroic combat, focusing instead on the quiet, mundane, and harsh soldier's life. Chekh masterfully selects the most poignant details of this kind of life.

fact keep the true nature of reality hidden from us. Once we realise that there is no way to conclusively prove that we actually exist in an objective reality, we must weigh up the implications of a non-objective, subjective reality and what it means for our lives. We have a choice for our belief in what exists. How will you choose?

Nothing The Experiment

From the day we are born, life is teaching us lessons. Whether it is how we navigate our physical environment or our socio-cultural surround, we are constantly trying to make sense of our reality by listening to these life lessons. Yet while many of life's lessons reinforce our reality, every so often life's lessons present us with a curious idea—that everything out there, our reality, may not be as "real" as it seems. *A Theory of Nothing: How Is the Finite Reality Created from the Infinite?* chronicles one man's lifelong journey to develop life's lessons into a concept of reality that challenges our preconceived notions of objectivity. Although we tend to think of the world around us and our reality as being a shared, objective world in which we live, author D. N. Warren-Smith furthers the philosophical argument that it is really our subjective perceptions that shape and even make the world around us. With compelling logical arguments and descriptions of personal experience, he shows that our most basic assumptions about the reality of our existence in
