LIFE AND ITS MYSTERIES first appeared in serial form in The New Age magazine, and in response to numerous requests, they are herewith published in one volume with their permission. A few revisions have been made and two chapters added entitled: " Future

Life of Animals, ” and “ Answers to Questions. ” This book attempts to explain in a clear and logical manner some of life's mysteries.

Mystery, of course, is only the absence of knowledge, for when we understand a thing it ceases to be a mystery. But since we never will know all, there will always be mysteries. Some of the views expressed may not appeal to the orthodox or to the materialist, but they will prove acceptable to those who are seeking light regarding the deeper things of life—and to those who have in their home a chair forevermore vacant.

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that

there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.
