This book is a continuation of the series Kas has written
on Triumph cars. Kas is accepting pre-orders now, and
expects to ship by approximately November 25, 2010.
This is a full size 8.5" X 11" book with 252 pages and over
500 photos. It covers stories on Triumph cars from
Australia with a 290 bhp TR-2, and in Germany, a lap in a
TR-6 on the Nuerburgring F-1 track, to Canada where a
TR-3 body is fit to a TR-6 chassis. There are lots of other
fix-it stuff, articles and stories. A big section is devoted to
the building of a GT-6 racer from scratch. Choosing the
best of 3 junkers, the racer is built up over the period of
the past twenty months and covered in detail, from
suspension, drive line, body additions and fixing, making
lexan windows, to the engine dyno run. Detail views of the
engine building and preparation which produced 204 bhp
at 8000 rpm may help you build any engine. Fourteen
chapters deal with the construction in photos and text. Roll
cage building , painting, chassis work, engine building all
done right in the home garage of Chuck Gee, 2007 winner
of the Kastner Cup in his top notch 1500 Spitfire. So you
can enjoy more of the detail of the photos, most in color, a
DVD comes with each book. There are many photos on
this DVD that there was not enough room to put in the
book. Put the DVD in your computer, view and enlarge!

This new volume, Food Safety: Rapid Detection and Effective
Prevention of Foodborne Hazards, focuses on the general
concepts, mechanisms, and new applications of analytical and
molecular biology techniques for detecting, removing, and
preventing chemical and biological hazards from food. Edited
by a microbiologist and medical officer with over 20 years of
laboratory and research experience in bacteriology, molecular
biology, infectious disease, and food safety, and who has
trained with the U.S. Food and Drug Administration (FDA), the
volume provides an abundance of valuable information on food
safety and foodborne hazards in our food and drink. Today,

food safety is a growing concern not only of food-related
professionals and policymakers, but also of the public.
Foodborne hazards, including chemical and biological hazards,
can cause food intoxication, infectious diseases, cancers, and
other health risks. Foodborne diseases are a major public
health and economic burden in both the developed and
developing countries. In the United States alone, the incidence
of foodborne illness is approximately 9.4 million cases with
about 56,000 hospitalizations and 1,351 deaths every year.
Written in an easy-to-read and user-friend style, each chapter
introduces a chemical or biological hazard and addresses:
What kinds of disease does the foodborne hazard cause Why
is it necessary for us to study it What routes does it take to
enter our food and how does it cause us to become sick How
do we identify it Chapters then go on to present new
technologies employed to detect, isolate, and/or identify the
hazard and prevention procedures such as: (ADD BULLETS)
How can the current application of new technology be used to
detect the foodborne hazards How do we prevent the diseases
caused by the foodborne hazards This book will be valuable to
professionals and other specialists who work in food
preparation, food safety, clinical laboratories, and food
manufacturing industry. It will be a resource for food handling
trainers as well as to anyone interested in foodborne hazards
and their affective detection, reduction, and prevention
strategies. This book can also serve as a important reference
for more specialized courses in food safety-related courses and
training programs.

Energy Management: Conservation and Audit discusses the energy
scenario, including energy conservation, management, and audit,
along with the methodology supported by industrial examples.
Energy economics of systems has been elaborated with concepts of
life cycle assessment and costing, and rate of return. Topics such
as energy storage, co-generation, and waste heat recovery to
energy efficiency have discussed. The challenges faced in
conserving energy sources (steam and electricity) have elaborated
along with the improvements in the lighting sector. Further, it covers
optimization procedures for the development in the industry related
to energy conservation. The researchers, senior undergraduate,
and graduate students focused on Energy Management,
Sustainable Energy, Renewable Energy, Energy Audits, and Energy
Conservation. This book covers current information related to
energy management and includes energy audit and review all the
leading equipment (boilers, CHP, pumps, heat exchangers) as well
as procedural frameworks (energy audits, action planning,
monitoring). It includes energy production and management from an
industrial perspective, along with highlighting the various processes
involved in energy conservation and auditing in various sectors and
associated methods. It also explores future energy options and
directions for energy security and sustainability.

TERI Energy Data Directory Yearbook, or TEDDY, is an
annual publication brought out by TERI since 1986.
TEDDY is often used as a reference in other peer-
reviewed books and journals for energy and environment-
related data. It gives an annual overview of the
developments in the energy supplying and consuming
sectors as well as the environment sector. It also provides
a review of the government policies that have implications
for these sectors of the Indian economy. The book
provides extensive data collated from the various
government ministries, on the energy supply sectors
including coal and lignite, oil and gas, power, and
renewable energy sources and technologies; energy
demand sectors, namely, agriculture, industry, transport
and domestic sectors; along with information related to
environment and climate change. Graphs and maps have
been used extensively to explain facts, that makes the
book an interesting read. Besides, detailed tables have
been provided at the end of each chapter, making TEDDY
a comprehensive data book. Each edition of TEDDY
contains India's commercial energy balances for the past
four years that provide comprehensive information on
energy flows within different sectors of the economy and
how they have been changing over time. These energy
balances and conversion factors are a valuable ready
reckoner for anybody working on energy and related
sectors. This is the 25th anniversary edition of the book
and a number of refinements have been made in the
content and presentation to reflect the changing needs of
the readers. At the same time, care has been taken to
ensure that continuity of information is preserved so that

researchers can study the trends over time in the energy sector.
