This is a well-organized discussion of the most common issues, both clinical and psychosocial, of general pediatrics. The book covers a wide scope of topics from those as benign as thumb-sucking to those as devastating as HIV and childhood cancer. A case history opens each chapter to set the stage for a practical discussion of primary care pediatrics. This state-of-the-art reference emphasizes concepts in health promotion, illness prevention, and family and community participation. The book includes well-child care for normal children and adolescents. It also discusses premature infants, and children with specific needs such as patients with Down's Syndrome. Signs and symptoms are presented by body system in a logical approach.

As a registered nurse for the last 28 years, my primary clinical expertise has been working in the pre-hospital environment as a flight nurse and a paramedic, as well as continuing to work in a variety of clinical areas which include the emergency department, pediatrics and endoscopy. My extensive clinical background has also given me the opportunity to work as a legal nurse consultant with one of the largest law firms in Arizona. As an EMS educator and program director of paramedic training programs for the last 20 years and most recently as the National Clinical Educator for one of the largest air medical transport companies, I truly enjoy teaching in a simple manner as to assure that students do have a strong basic understanding in making critical care decisions and that they will be providing the highest quality of patient care beginning from the least to the most invasive management of care for the patients they are transporting. My goal as a professional and as an EMS educator has always been and will continue to encourage students to have the desire to learn and grow in their profession, as well as contribute to EMS in a way that inspires positive change. "Although most progressive thinkers have always assumed that a good education must be connected to an universal ethical code, no one has yet spelled out how such a connection is to be primordial in the educational process--that is until Tony Monchinski undertook such a task in this book. By first analyzing the pedagogical works of John Dewey, Paulo Freire, and such feminists as Carol Gilligan who first posited the link between education and the ethic of care, Monchinski is able to show how such a link is especially needed today. That link, Monchinski brilliantly insists, is fundamental to all critical theories of pedagogy."--John Gerassi, Professor of Political Science, Queens College, City University of New York.

The government prioritizes systematic synthetic phonics as a key strategy in the teaching of reading and this is your guide to teaching systematic synthetic phonics in primary schools. This text supports trainee teachers working towards primary QTS through the exploration of a range of aspects of phonics teaching. It gives a balance of research and practice and allows trainees to develop and in-depth understanding of what works in phonics teaching, and why. It begins with the subject knowledge that underpins effective teaching - key aspects of the alphabetic code from discriminating sounds and phonemes to teaching long vowel phonemes and their different spellings and pronunciations. It goes on to explore pedagogy from the early years to Key Stage2 giving guidance on, among others, systematic progression, intervention and multi-sensory and interactive methods. The title includes a review of different popular phonics programmes, set against the DfE (2011) criteria for high-quality phonics teaching. What's new to this edition? Audit and test sections at the end of every chapter so students can test themselves and see how much progress they've made A new chapter reviewing the use of technology to support the teaching of phonics.

The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.
