Reflecting the 2010 Emergency Cardiovascular Care guidelines, Mosby's Paramedic Textbook, 4th Edition provides a comprehensive learning tool for both first-time and refresher paramedic students. Coverage includes an overview of key subjects such as pharmacology, airway management, medical disorders, patient assessment, and trauma. ALS patient care skills are presented step by step, both in the book and in online video clips. New to this edition are nine new chapters, many new topics, and 150 new photos. Written by paramedic expert Mick Sanders, Mosby's Paramedic Textbook follows the National EMS Education Standards and offers complete coverage of the National Standard Curriculum (NSC) for the EMT-Paramedic. More than 1,000 illustrations -- including 150 that are NEW -- accurately present different techniques and skills. Chapter openers, objectives and key terms set the stage for learning. Advanced Life Support (ALS) skills are presented step by step and in full color. Critical thinking questions help in understanding concepts and in applying them to patient care. A summary and a list of references in each chapter make review easier. A herbal appendix in the pharmacology chapter provides access to herbal content. Drug monographs on the Evolve companion website include Mosby's Essential Drugs, with instant access to comprehensive, up-to-date information on the medications that are administered by paramedics as well as those most commonly prescribed to patients. NEW! Nine new chapters and thoroughly updated content align the text with the new National EMS Education Standards and reflect the 2010 ECC (Emergency Cardiovascular Care) guidelines. NEW topics include coronary bypass, endocarditis, adult IO infusion, bird flu, new fluid resuscitation guidelines for trauma patients, drugs of abuse (Vicodin, Oxycotin), prediabetes, and management of hypothermia and drowning. NEW Show Me the Evidence boxes show the value and impact of evidence-based research. NEW Did You Know? boxes supplement chapter content with interesting and relevant information. NEW Look Again feature includes cross-references and specific page numbers for easy review of information that was covered in earlier chapters. NEW farm considerations in the Trauma section enhance rural practice with the kinematics of farm machinery incidents. Additional Critical Thinking boxes encourage the application of critical thinking skills to "real-life" EMS. Additional cultural considerations enhance your ability to deal with the issues of multicultural patients. NEW Advanced Practice Procedures in Critical Care appendix provides an overview of specialty procedures for paramedics who work in critical care settings. Revised and updated Emergency Drug Index reflects the new 2010 ECC guidelines with coverage of more than 75 emergency drugs, their dose and administration, onset and duration, indications and contraindications, adverse reactions, and special considerations. **NSC Pediatric First Aid, CPR & AED** McGraw-Hill Science/Engineering/Math

This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation, estimating travel demand, and costing transportation projects Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs Evaluating a project's impact on economic development and land use as well as its impact on society and culture Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics Evaluating alternative projects on the basis of multiple performance criteria Programming transportation investments so that resources can be optimally allocated to meet facility-specific and system-wide goals Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided with resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project

evaluation and decisionmaking. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation.

The Book of R Jones & Bartlett Publishers

A twentieth-century innovation, foreign aid has become a familiar and even expected element in international relations. But scholars and government officials continue to debate why countries provide it: some claim that it is primarily a tool of diplomacy, some argue that it is largely intended to support development in poor countries, and still others point out its myriad newer uses. Carol Lancaster effectively puts this dispute to rest here by providing the most comprehensive answer yet to the question of why governments give foreign aid. She argues that because of domestic politics in aid-giving countries, it has always been—and will continue to be—used to achieve a mixture of different goals. Drawing on her expertise in both comparative politics and international relations and on her experience as a former public official, Lancaster provides five in-depth case studies—the United States, Japan, France, Germany, and Denmark—that demonstrate how domestic politics and international pressures combine to shape how and why donor governments give aid. In doing so, she explores the impact on foreign aid of political institutions, interest groups, and the ways governments organize their giving. Her findings provide essential insight for scholars of international relations and comparative politics, as well as anyone involved with foreign aid or foreign policy.

A quarter of adolescents engage in some form of self-harm and even experienced therapists can find working with these young people difficult. Based on Cognitive Behaviour Therapy (CBT), a highly effective method for working with emotional problems, **Cutting Down** offers a practical and accessible programme for mental health therapists from different professional backgrounds working with young people who self-harm. The programme is comprised of four parts, each covering a specific stage of therapy, and is split into 27 short modules. Although designed to be delivered over a course of 14 sessions, the programme is presented in a way that allows the therapist to decide which combination of specific modules is chosen and how long is spent on each, based on the specific clinical needs of the person they are working with. Throughout the programme, virtual patients are used to illustrate the various exercises and strategies. Part One, **What's Going On?**, introduces self-harm and CBT and aims to develop insight into feelings, problems, goals and the concept of change. Part Two, **Feelings, Thoughts and Behaviour**, looks at working on activities, managing depression and identifying and managing negative thoughts. Part Three, **Coping Strategies**, introduces modules on problem solving, assertiveness, mindfulness and alternatives to self-harm. Part Four, **On You Go!**, finishes up the programme with a review of goals, identifying triggers and developing a 'first aid kit' and a 'tool box' of skills to reinforce the programme. Downloadable worksheets enhance the practicality of the text. Designed to support clinicians working with adolescents engaging in self-harm, this unique workbook is ideal for counsellors, counselling psychologists, clinical psychologists, CBT therapists, IAPT practitioners, CAMHS mental health workers and nurse therapists as well as students and trainees.

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. Occupational Health and Safety in the Care and Use of Nonhuman Primates is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.
