The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. Occupational Health and Safety in the Care and Use of Nonhuman Primates is intended

as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.

Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades, policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. **Emergency Care for Children** examines the challenges associated with the provision of emergency services to children and families and evaluates progress since the publication of

the Institute of Medicine report **Emergency Medical Services for Children** (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of:

- The role of pediatric emergency services as an integrated component of the overall health system.
- System-wide pediatric emergency care planning, preparedness, coordination, and funding.
- Pediatric training in professional education.
- Research in pediatric emergency care.

**Emergency Care for Children** is one of three books in the **Future of Emergency Care** series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems.

A quarter of adolescents engage in some form of self-harm and even experienced therapists can find working with these young people difficult. Based on Cognitive Behaviour Therapy (CBT), a highly effective method for working with emotional problems, Cutting Down offers a practical and accessible programme for mental health therapists from different professional backgrounds working with young people who self-harm. The programme is comprised of four parts, each covering a specific stage of therapy, and is split into 27 short modules. Although designed to be delivered over a course of 14

sessions, the programme is presented in a way that allows the therapist to decide which combination of specific modules is chosen and how long is spent on each, based on the specific clinical needs of the person they are working with. Throughout the programme, virtual patients are used to illustrate the various exercises and strategies. Part One, What's Going On?, introduces self-harm and CBT and aims to develop insight into feelings, problems, goals and the concept of change. Part Two, Feelings, Thoughts and Behaviour, looks at working on activities, managing depression and identifying and managing negative thoughts. Part Three, Coping Strategies, introduces modules on problem solving, assertiveness, mindfulness and alternatives to self-harm. Part Four, On You Go!, finishes up the programme with a review of goals, identifying triggers and developing a 'first aid kit' and a 'tool box' of skills to reinforce the programme. Downloadable worksheets enhance the practicality of the text. Designed to support clinicians working with adolescents engaging in self-harm, this unique workbook is ideal for counsellors, counselling psychologists, clinical psychologists, CBT therapists, IAPT practitioners, CAMHS mental health workers and nurse therapists as well as students and trainees.

Multimedia Standard First Aid Research & Education Assoc. This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, which can help transportation professionals to optimize their investment choices. The authors present a proven set of methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance

measures for evaluation, estimating travel demand, and costing transportation projects  
Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs  
Evaluating a project's impact on economic development and land use as well as its impact on society and culture  
Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics  
Evaluating alternative projects on the basis of multiple performance criteria  
Programming transportation investments so that resources can be optimally allocated to meet facility-specific and system-wide goals  
Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decisionmaking. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational

---

evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of transportation systems analysis and evaluation.
