Instructional quality can make or break the learning experience, especially in digital environments where the expressional nuances of interpersonal communication are lost. The most effective distance education instructors and experts are those who recognize the educational needs of students and are able to address those needs through creative use of the technological tools available to them.

Identification, Evaluation, and Perceptions of Distance Education Experts explores the current and future trends, needs, and priorities that affect the development of distance

education in a postmodern world. This premier reference work will be of significance to those interested in online learning, teaching and training, communication, and education across multiple sectors such as universities, colleges, schools, profit/non-profit e-organizations, and e-commerce.

Respect for the procedural rights of any individual involved in police or judicial matters is a basic tenet of a modern and sound system of justice. Providing legal interpreting services to suspects, defendants, victims and witnesses who are not proficient in the language in which legal matters are being conducted is a broadly accepted practice throughout the EU. However, it is

only recently that emphasis has been placed on the quality of the services provided. EU Directive 2010/64/EU, through its mandate for quality in legal interpreter and translating services, has provided the impetus needed to reexamine current practices and work towards common standards and practices across the EU that would enhance mutual trust and allow for reciprocity and the sharing of expertise. This volume reflects the deliberations of a panel of experts from the fields of legal interpreting, testing theory, and public policy who agree that the most effective means of ensuring quality is through testing and certification. It addresses issues related to the assessment of the skill sets and knowledge required to ensure high quality

legal interpreting and offers practical guidance and advice on the design and administration of a valid and reliable certification process.

How to Design and Evaluate Research in Education provides a comprehensive introduction to educational research. Step-by-step analysis of real research studies provides students with practical examples of how to prepare their work and read that of others. End-of-chapter problem sheets, comprehensive coverage of data analysis, and information on how to prepare research proposals and reports make it appropriate both for courses that focus on doing research and for those that stress how to read and understand research.

The story of West Indian immigrants to the United States is generally considered to be a great success. Mary Waters, however, tells a very different story. She finds that the values that gain first-generation immigrants initial success--a willingness to work hard, a lack of attention to racism, a desire for

education, an incentive to save--are undermined by the realities of life and race relations in the United States. Contrary to long-held beliefs, Waters finds, those who resist Americanization are most likely to succeed economically, especially in the second generation.
