Aigae Abstracts is the first in a series of bibliographies on water resources and pollution published by IFI/Plenum Data Corporation in cooperation with the Water Resources Scientific Information Center (WRSIC). It is produced wholly from the information base comprising material abstracted and indexed for Selected Water Resources Abstracts. The bibliography is divided into volumes according to the publication dates of the source documents. Volume 1 contains 569 abstracts covering publication dates up to and including 1969; Volume 2 contains 730 abstracts covering the years 1970 to 1972. The material included in this bibliography represents computer selections based on the presence of a form of the word "alga" somewhere in the referenced citation. Substantively, the material typifies WRSIC's "centers of competence" approach to information support of the Office of Water Resources Research (OWRR) of the Department of the Interior. Most of the references in this bibliography are the work of the center of competence on eutrophication at the University of Wisconsin. The indexes refer to the WRSIC accession number, which follows each abstract. The Significant Descriptor Index is made up of a fraction of the total descriptors and identifiers by which each paper has been indexed. It represents weighted terms that best describe the information content; this status is indicated by the asterisks which precede them. The General Index includes all the remaining descriptors and identifiers by which each paper in this bibliography has been indexed.

Most research on the psychological impact of computers and the Internet has focused on the negative side of technology — i.e. how the use (abuse) of interactive systems and videogames can negatively affect mental health and behavior. On the other hand, less attention has been devoted to understanding how emerging technologies can promote optimal functioning at individual, group, and community levels. Integrating Technology in Positive Psychology Practice explores the various roles that technology can play in the development of psychological interventions aimed at helping people thrive. Exploring the ways in which ICT can be utilized to foster positive emotions, promote engagement in empowering activities, and support connectedness between individuals, groups, and communities, this timely publication is designed for use by psychologists, IT developers, researchers, and graduate students.

The International Conference on Production Research has a good tradition: The first Conference was held in Birmingham 1971 with 61 participants. With respect to the decision that the Conference should be held every second year, by this time the Conference has been held in the following countries: Birmingham (1971, UK), Copenhagen (1973, Denmark), Amhurst (1975, USA), Tokyo (1977, Japan), Amsterdam (1979, The Netherlands), Novi Sad (1981, Yugoslavia), Windsor (1983, Canada), Stuttgart (1985, Germany), and the next Conference will take place in Cincinnati (1987, USA). The number of submitted abstracts and papers was continuously increasing such that the Programme Committee of this actual 8th Conference on Production Research has been forced to introduce a further refereeing procedure. Each submitted abstract was presented to at least two referees. This resulted not only in a reduction of the number of presented full papers and poster contributions but, as the Programme Committee and the Editors hope, it led also to a considerable increase in the scientific quality of this 8th International Conference on Production Research. The preceding conference in Windsor, Canada, was dedicated to the topic: Production Research as a Means of Productivity Improvement. We don't believe that this statement has become untrue in the meanwhile.

The use of the cognitive interviewing method for survey question testing has proliferated and evolved over the past 30 years. In more recent years the method has been applied to the evaluation of information letters and leaflets and to research consent forms. This book provides a practical handbook for implementing cognitive interviewing methods in the context of applied social policy research, based on the approach used by the authors at the NatCen Social Research (NatCen) where cognitive interviewing methods have been used for well over a decade. The book provides a justification for the importance of question testing and evaluation and discusses the position of cognitive interviewing in relation to other questionnaire development and evaluation techniques. Throughout the book, the focus is on providing practical and hands-on guidance around elements such as sampling and recruitment, designing probes, interviewing skills, data management and analysis and how to interpret the findings and use them to improve survey questions and other documents. The book also covers cognitive interviewing in different survey modes, in cross national, cross cultural and multilingual settings and discusses some other potential uses of the method.

This book analyzes the changing dynamics of competition and the emergence of deglobalization trends and processes. The authors begin by explaining the role of technology on globalization and its impact on competitive strategy. Then, they present a theoretical framework that outlines the connection between globalization and modern society. The book also delves into the shift toward deglobalization and addresses how the onset of the COVID-10 pandemic has accelerated the process. Concluding with a discussion of how the 4th Industrial Revolution has resulted in new paradigms for business, this book will fill a gap through its investigation of an emerging concept for scholars in international business.
