WINNER 2009 CHOICE AWARD OUTSTANDING ACADEMIC TITLE! The typical introduction to physics leaves readers with the impression that physics is about 30 different, unconnected topics such as motion, forces, gravity, electricity, light, heat, energy, and atoms. More often than not, these readers are left to conclude that physics is mostly about boring, lifeless numbers. Questioning the Universe: Concepts in Physics offers the nonscientist an alternative view: one that demonstrates how physics is perpetually evolving and shows how so many seemingly diverse concepts are intimately connected. In fact, one could argue that the

most important ideas in modern physics are all about unification, and that these ideas are as fascinating as they are elegant. Physicists today believe that Mother Nature is remarkably efficient and requires only a relatively small number of laws to keep her universe in working order. We may not yet know all of these laws; but at the center of physics is a faith that she is indeed understandable ...and that someday, we will see her full beauty. The purpose of this book is to tell readers the story of what we have learned about nature so far and how we have done it. Written to arouse curiosity, this compelling and readable work: Delves into the most basic laws regarding motion and energy, waves and particles Introduces modern theories, including relativity, quantum mechanics, and particle physics Describes the key role played by that elemental building block, the atom Discusses the evolution of the universe, including the formation of stars and the mystery of dark matter and dark energy This book is not for those doing physics but is aimed at those who simply want to learn about physics, so it requires only the most minimal math. What it does require is a sense of curiosity, an appreciation of beauty, and the capacity for awe.

What does it mean to live in a post-atomic world? Photography and contemporary art offer a provocative lens through which to comprehend the by-products of the atomic age, from weapons proliferation, nuclear disaster, and aerial surveillance to toxic waste disposal and climate change. Confronting cultural fallout from the dawn of the nuclear age, Through Post-Atomic Eyes addresses the myriad iterations of nuclear threat and their visual legacy in the twentieth and twenty-first centuries. Whether in the iconic black-and-white photograph of a mushroom cloud rising over Nagasaki in 1945 or in the steady stream of real-time video documenting the 2011 meltdown at the Fukushima Daiichi nuclear power plant, atomic culture - and our understanding of it - is inextricably constructed by the visual. This book takes the image as its starting point to address the visual inheritance of atomic anxieties; the intersection of photography, nuclear industries, and military technocultures; and the complex temporality of nuclear technologies. Contemporary artists contribute lens-based works that explore the consequences of the nuclear, and its afterlives, in the Anthropocene. Revealing, through both art and prose, startling new

connections between the ongoing threat of nuclear catastrophe and current global crises, Through Post-Atomic Eyes is a richly illustrated examination of how photography shapes and is shaped by nuclear culture.

South Asia is often described — quite rightly — as the most dangerous place on earth.

South Asia urgently needs to overcome the bitter legacies of the past in order to create an enabling environment for peace and security, which is critical to unleash the synergies

necessary for economic progress. The twin phenomena of strategic peril and economic promise pose a daunting challenge, one that must be met for South Asia to be in sync with the great global transformation of our times.

There can be little doubt about the economic and trade benefits that would accrue to the global economy from a peaceful and stable South Asia, as indeed a promising peace dividend for the people of the region. It is further hoped that the book will prove to be of immense value to teachers, students and researchers
