The ultimate goal is to improve and broaden our understanding of numerical methods and their application in solving geotechnical engineering problems. The posts herein are NOT just restricted to elaboration of advanced numerical modeling only. Simplified methods commonly-used in practice are discussed as well.

With the  
advance of  
computer  
technology and  
the progress  
of computing  
power,  
numerical  
simulation  
methods have  
become an  
indispensable  
means to solve  
geotechnical  
engineering  
problems. Most  
of the  
numerical  
methods used  
in  
geotechnical  
engineering

are the finite  
difference  
method (FDM),  
finite element  
method (FEM),  
boundary  
element method  
(BEM),  
discontinuous  
deformation  
analysis (DDA)  
method,  
discrete  
element method  
(DEM), particle  
flow method  
(PFM), etc.
