Understanding Nursing Research - eBook Lippincott Williams & Wilkins
This is a book about using the best evidence to inform treatment decisions for people with cancer. It is written by oncologists for oncologists, using examples throughout to illustrate key points. The book starts off with a "toolbox" section, written in a way which will help those relatively new to the principles of evidence-based oncology to understand the key issues, and equip them with the basics of how to tell a good study from a bad one. The majority of the book then deals with an evidence-based summary of the common and important cancers in a structured and easy to read format around common patient scenarios and frequently asked questions. Whilst most of the evidence is based on randomised controlled trials, other studies are cited where appropriate eg when discussing adverse events. The unique accompanying book website will contain updates of new chapters and studies as they become available. Written by leading world figures in the evidence-based movement Includes free CD-ROM with PC eBook and sample PDA

chapter Methodology of reviewing and appraising evidence discussed in the context of cancer management Clinical sections covering prevention and screening Chapters on treatment of the individual major cancers review the current best available evidence to most frequently asked questions Rigorously structured explicit searches, evidence of efficacy and harms, plus comment around clinical scenarios Free-access update website keeping the text current and live: www.evidbasedoncology.com

Top Five Regrets of the Dying Lippincott Williams & Wilkins

Revised edition of the best-selling memoir that has been read by over a million people worldwide with translations in 29 languages. After too many years of unfulfilling work, Bronnie Ware began searching for a job with heart. Despite having no formal qualifications or previous experience in the field, she found herself working in palliative care. During the time she spent tending to those who were dying, Bronnie's life was transformed. Later, she wrote an Internet blog post, outlining the most common regrets that the people she had cared for had expressed. The post gained so much momentum that it was viewed by more than three million readers worldwide in its first year. At the request of many, Bronnie subsequently wrote a book, The Top Five Regrets of the Dying, to share her story. Bronnie has had a colourful and diverse life. By applying the lessons of those nearing their death to her own life, she developed an understanding that it is possible for everyone, if we make the right choices, to die with peace of mind. In this revised edition of the best-selling memoir that has been read by over a million people worldwide, with translations in 29 languages, Bronnie expresses how significant these regrets are and how we can positively address these issues while we still have the time. The Top Five Regrets of the Dying gives hope for a better world. It is a courageous, life-changing book that will leave you feeling more compassionate and inspired to live the life you are truly here to live.

Bernadette Mazurek Melnyk and Ellen Fineout-Overholt are creators of the ARCC (Advancing Research and Clinical practice through close Collaboration) Model, an innovative strategy for implementing and sustaining evidence-based practice in healthcare systems. The ARCC Model is cited as an exemplar of education in evidence-based practice in the Board on Health Care Services and the Institute of Medicine's book, Health Professions Education: A Bridge to Quality. "McInyk and Fineout-Overholt's book should be required reading in all graduate programs. Their text has provided a blueprint for the future of nursing practice and a rigorously substantiated and clearly described means for clinicians, educators, and administrators to participate in improving quality of care." Janet D. Suffering is an unavoidable reality in health care. Not only are patients and families suffering but also the clinicians who care for them. Commonly the suffering experienced by clinicians is moral in nature, in part a reflection of the increasing complexity of health care, their roles within it, and the expanding range of available interventions. Moral suffering is the anguish that occurs when the burdens of treatment appear to outweigh the benefits; scarce human and material resources must be allocated; informed consent is incomplete or inadequate; or there are disagreements about goals of treatment among patients, families or clinicians. Each is a source of moral adversity that challenges clinicians' integrity: the inner harmony that arises when their essential values and commitments are aligned with their choices and actions. If moral suffering is unrelieved it can lead to disengagement, burnout, and undermine the quality of clinical care. The most studied response to moral adversity is moral distress. The sources and sequelae of moral distress, one type of moral suffering, have been documented among clinicians across specialties. It is vital to shift the focus to solutions and to expanded individual and system strategies that mitigate the detrimental effects of moral suffering. Moral resilience, the capacity of an individual to restore or sustain integrity in response to moral adversity, offers a path forward. It encompasses capacities aimed at developing self-regulation and self-awareness, buoyancy, moral efficacy, self-stewardship and ultimately personal and relational integrity. Clinicians and healthcare organizations must work together to transform moral suffering by cultivating the individual capacities for moral resilience and designing a new architecture to support ethical practice. Used worldwide for scalable and sustainable change, the Conscious Full Spectrum approach, offers a method to solve problems to support integrity, shift patterns that undermine moral

resilience and ethical practice, and source the inner potential of clinicians and leaders to produce meaningful and sustainable results that benefit all.
