How to Help the Suicidal Person to Choose Life: The Ethic of Care and Empathy as an Indispensable Tool for Intervention National Academies Press

This is the first practical guide for nurses on how to incorporate the knowledge, skills, and tools of Strength-Based Nursing Care (SBC) into everyday practice. The text, based on a model developed by the McGill University Nursing Program, signifies a paradigm shift

from a deficit-based model to one that focuses on individual, family, and community strengths as a cornerstone of effective nursing care. The book develops the theoretical foundations underlying SBC, promotes the acquisition of fundamental skills needed for SBC practice, and offers specific strategies, techniques, and tools for identifying strengths and harnessing them to facilitate healing and health. The testimony of 46 nurses demonstrates how SBC can be effectively used in multiple settings across the lifespan.

This new approach to leadership focuses on how students can develop leadership skills right from the start of their nursing programme through to transitioning to their first role. The book first takes students through the underpinning knowledge and theory and then through practical skills to help them understand all aspects of leadership and how it is a key component of providing quality care to patients in a range of environments and settings. Real stories from nursing leaders, practitioners and students are included to inspire students

and show them how they can impact positively on practice, whatever level they are working at. Key features include: Real life focus, grounded in everyday practice, with lots of case studies and examples to help students see how theory relates to practice Activities to help students reflect about their own practice, and about themselves as leaders Video interviews with nurse leaders and students on the companion website Further reading and links to journal articles in both the book and the companion website help students delve deeper and prepare for assessments.

The Research Critique Lippincott Williams & Wilkins

'The 4th edition of this extensive text is an outstanding resource prepared by nurses (and a librarian) for nurses. In a structured and helpful style it presents thousands of items from the literature - published papers, reports, books and electronic resources - as a clear, accessible, and most of all useful collection. The efforts to signpost and lead the reader to the sought-for information are effective and well-conceived, and the "How to use this book" section is remarkably simple...the book should be found in every nursing and health library, every research institute and centre, and close to many career researchers' desks' - RCN Research
This latest edition of *Resources for Nursing Research* provides a comprehensive

bibliography of sources on nursing research, and includes references for books, journal papers and Internet resources. Designed to act as a 'signpost' to available literature in the area, this Fourth Edition covers the disciplines of nursing, health care and the social sciences. Entries are concise, informative and accessible, and are arranged under three main sections: · 'Sources of Literature' covers the process of literature searching, including using libraries and other tools for accessing literature · 'Methods of Inquiry' includes an introduction to research, how to conceptualize and design nursing and health research, measurement and data collection, and the interpretation and presentation of data · 'The Background to Research in Nursing' encompasses the development of nursing research; the profession's responsibilities; the role of government; funding; research roles and careers; and education for research. Fully revised and updated, the Fourth Edition includes just under 3000 entries, of which 90% are new. It has extensive coverage of US, UK literature and other international resources. This new edition will be an essential guide

for all those with an interest in nursing research, including students, teachers, librarians, practitioners and researchers. *Writing for Publication in Nursing* Springer Publishing Company
This volume addresses many of the problematic issues in qualitative research. Leading qualitative methodologists from orientations in phenomenology, grounded theory and ethnography contribute chapters on their favourite issues, which also form the bases for the 'dialogues' which alternate with each chapter. Most of the problems discussed relate to every qualitative nursing project: improving the use of self; examining one's own culture; some myths and realities of qualitative sampling; debates about counting and coding data; and ethical issues in interviewing. Encyclopedia of Nursing Research Springer Publishing Company
This ambitious and long-awaited volume brings together foremost nursing scholars and educators to review and critique the state of nursing research across topics most relevant to current practice. Comprehensive in scope, cogent and truly thought provoking, a book such as the Handbook

for Clinical Nursing Research is a must-have shelf reference for every nurse carrying out research or aspiring to conduct research and for those who teach them.

Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur

in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. Varney's Midwifery Elsevier Health Sciences

This volume sets the stage for understanding the evolution and importance of nursing science in the field by providing a brief historical overview of the tobacco epidemic and emerging science, describing changing trends in tobacco use, reviewing health risks of smoking and benefits of quitting, reviewing concepts in nicotine addiction and evidence-based recommendations for tobacco dependence treatment. Also highlighted are nursing science efforts and leadership in addressing two barriers to mounting programs of nursing research in tobacco control: the lack of nursing education and training in

tobacco control and the limited research funding and mentorship. Finally, the contributors to this volume address the issue of smoking in the profession as it influences nurses' health, interventions with patients, and, potentially, scholarship efforts.

Evidence-Based Oncology SAGE

Integrative Nursing uses an evidence-based approach to provide nursing protocols for the management of conditions that respond well to integrative treatment. Alternative and complementary therapies are not presented as substitutes for mainstream medical care, but they are "integrated" into the overall regimen, and always subjected to critical analysis.

This book is about the ethics of nursing and midwifery, and how these were abrogated during the Nazi era. Nurses and midwives actively killed their patients, many of whom were disabled children and infants and patients with mental (and other) illnesses or intellectual disabilities. The book gives the facts as well as theoretical perspectives as a lens through which these crimes can be viewed. It also provides a way to teach this history to nursing and midwifery students, and, for the first time, explains the role of one of the world's most historically prominent midwifery leaders in the Nazi crimes.

Measurement in Nursing and Health Research Jones & Bartlett Learning

The first resource to present the “nuts and bolts” of creating a successful nursing research program. This text provides a roadmap to develop and nurture a nursing research program in complex hospital environments. Written by experienced clinical researchers who have successfully implemented these techniques in the Cleveland Clinic, the handbook shows nurses how to build and sustain a research program—a fundamental requirement to transform patient care and administrative practices and obtain and sustain American Nurses Credentialing Center Magnet® program recognition. The book demonstrates, step-by-step, how leaders and staff can integrate nursing research into the workflow of complex health care environments. It provides a framework for developing horizontal and vertical structures that promote the creation of new knowledge and for enhancing the scientific foundation of nursing evidence. With a focus on practical applications, the book addresses the structures, systems, processes, and resources required for creating and maintaining a research program along with methods for its evaluation. The handbook describes foundational principles that apply to hospitals of all sizes (including ambulatory centers and hospitals without extensive resources), and provides concrete guidance in adapting

structures and processes to fit the needs of hospitals with varied nursing staff size and program goals. Replete with a wealth of ideas and strategies, it provides detailed templates that will assist novice and more experienced researchers, guidelines for committees to support nursing research within a hospital, and discusses the “who,” “what,” “why” of systems that enhance workflow. Chapters offer experiential stories written by nurses who describe the “real world” experiences of implementing clinical research in their practice. Tables and figures further illuminate information. Key Features: Written by experienced researchers who have implemented the techniques used in this book Provides a framework adaptable for use with hospitals of all sizes Includes guidelines for committees/councils to support nursing research within the organization Discusses processes and systems that enhance collaboration and workflow Offers stories from the field by nurses about “lessons learned” from their research experiences
Handbook of Clinical Nursing Research
Elsevier
This is a book about using the best evidence to inform treatment decisions for people with cancer. It is written by oncologists for oncologists, using examples throughout to

illustrate key points. The book starts off with a “toolbox” section, written in a way which will help those relatively new to the principles of evidence-based oncology to understand the key issues, and equip them with the basics of how to tell a good study from a bad one. The majority of the book then deals with an evidence-based summary of the common and important cancers in a structured and easy to read format around common patient scenarios and frequently asked questions. Whilst most of the evidence is based on randomised controlled trials, other studies are cited where appropriate eg when discussing adverse events. The unique accompanying book website will contain updates of new chapters and studies as they become available. Written by leading world figures in the evidence-based movement Includes free CD-ROM with PC eBook and sample PDA chapter Methodology of reviewing and appraising evidence discussed in the context of cancer management Clinical sections covering prevention and screening Chapters on treatment of the individual major cancers review the current best available evidence to most frequently asked questions Rigorously structured explicit searches, evidence of efficacy and harms, plus comment around clinical scenarios Free-access update website keeping the text current and
