Making Nutrition Your Business Benjamin Cummings

In the past 20 years micronutrients have assumed great public health importance and a considerable amount of research has lead to increasing knowledge of their physiological role. Because it is a rapidly developing field, the WHO and FAO convened an Expert Consultation to evaluate the current state of knowledge. It had three main tasks: to review the full scope of vitamin and minerals requirements; to draft and adopt a report which would provide recommended nutrient intakes for vitamins A, C, D, E, and K; the B vitamins; calcium; iron; magnesium; zinc; selenium; and iodine; to identify key issues for future research and make preliminary recommendations for the handbook. This report contains the outcome of the Consultation, combined with up-to-date evidence that has since become available.

Nutrition at a Glance introduces key nutrition facts, such as the role of key nutrients in maintaining health, and addresses the concepts of nutrient metabolism, nutritional intake and what makes an adequate diet. It covers food safety, allergy and intolerance, GM foods, diet-related diseases and nutrigenomics. Nutrition at a Glance: • Is superbly illustrated, with full colour illustrations throughout • Includes nutrition ‘ hot topics ’ such as gene-nutrient interactions and dietary supplements • Has strong international appeal, with different dietary requirements provided for many countries • Is a reference text suitable for post-docs and junior scientists, including those working in public health and dietetics • Includes a companion website at [www.ataglanceseries.com/nutrition](http://www.ataglanceseries.com/nutrition) featuring interactive multiple choice questions, abbreviations, a glossary, references and further reading, and Appendix B 1: Global dietary guidelines and Dietary Reference Intakes **Advanced Sports Nutrition** John Wiley & Sons

Having ensured a basic knowledge in nutrition with Introduction to Human Nutrition, this book allows students to explore nutrition and metabolism across the various systems of the body rather than to deal in advanced aspects of nutrition and metabolism on a nutrient by nutrient basis or by group of nutrients. Thus there is not an identifiable chapter on Vitamin A; this vitamin is covered in all of these chapters: The Nutrient Requirements of Tissues and Organs, The Sensory System, Molecular aspects of Nutrition, The Reproductive System, The immune and inflammatory System and Under-nutrition. Nutrition & Metabolism provides the student with the detailed information they need about how different nutrients effect and are required by different parts of the body. This allows the student to concentrate on parts of the body at one time rather than concentrating on each individual nutrient or mineral, making the information more assessable and easier to digest.
